

# Penn Chiropractic Centre Recognizes Dr. Randolph Penn's 35 Years Serving Jackson Community

*April 29, 2026*

JACKSON, MI - April 29, 2026 -
Penn Chiropractic Centre recognizes Dr. Randolph Penn's 35 years of serving the Jackson community and guiding families toward health. As a Jackson, MI chiropractor, Dr. Penn has owned and operated the practice while applying training from Life University and a variety of chiropractic techniques to patient care.

The center addresses neurological interference from physical, chemical, or emotional factors through adjustments to the spine and other body systems. This approach supports the body's natural healing and rehabilitative processes. Dr. Penn's background includes sports chiropractic experience with athletes at professional, college, high school, and youth levels. He maintains an active role as a member of the PGA Tour medical staff.

Dr. Penn incorporates specific technologies in the office. These include deep-tissue laser therapy and pulsed electromagnetic field therapy, known as PEMF. Deep-tissue laser therapy is an FDA-cleared modality used to support tissue repair in clinical settings. PEMF is an FDA-cleared technology applied in various rehabilitation

contexts. The practice operates a disc specialty center with a non-surgical spinal decompression table for patients with bulging, herniated, or degenerative discs. This equipment is among systems cleared by the FDA for relieving associated pain and symptoms.

Services at the center include chiropractic adjustments, nutritional guidance, personal injury rehabilitation, and lifestyle recommendations on exercise and posture. Screenings assess spine and posture issues. The practice supports care for neck pain, back pain, sciatica, sports-related concerns, pediatric patients, and prenatal needs.

"Guiding families in the Jackson community through chiropractic care has been central to my work over 35 years," said Dr. Randolph Penn, owner of Penn Chiropractic Centre. "We focus on reducing interference with adjustments and selected technologies to support patient health goals."

Appointments begin with reviews of medical history and objectives. This information informs customized plans. Communication during care allows adjustments based on patient responses. Outcomes vary among individuals, and multiple sessions may be required.

The disc specialty program applies non-surgical spinal decompression to manage disc conditions. This method gently applies controlled tension to the spine. It serves as one option within a broader set of services for back and neck concerns.

"In practice, disc care combined with other chiropractic methods addresses patient needs based on their specific situations," added Dr. Randolph Penn. "Technologies such as deep-tissue laser therapy and PEMF complement adjustments in the care process."

Sports rehabilitation at the center uses manual techniques, massage, and stretching. These elements target recovery from injuries. Nutritional counseling and corrective exercises provide additional support. The overall approach aligns with the center's mission to educate families on health factors and promote proactive wellness.

Penn Chiropractic Centre maintains a patient-centered model. Plans reflect individual histories and preferences. Care extends to stress-related concerns, joint issues, and general vitality. BrainTap technology is available as a supportive modality for relaxation.

Over 35 years, Dr. Penn has contributed to community health through consistent service. The practice integrates traditional chiropractic methods with wellness technologies. This combination offers options for those exploring natural approaches to health management.

The center emphasizes accessibility and individualized attention. First visits allow thorough evaluation. Follow-up care tracks progress and refines plans accordingly. This process supports patients in addressing immediate concerns while considering long-term wellness.

Services cover a range of conditions encountered in daily life, work, sports, and family activities. Personal injury rehabilitation assists recovery from various incidents. Pediatric and prenatal care address needs across age groups and life stages. Each element operates within established chiropractic frameworks.

Penn Chiropractic Centre functions with a commitment to factual, evidence-informed practice. Technologies are selected for their documented applications in relevant fields. The disc decompression table provides a non-surgical avenue for eligible patients. Adjustments remain a core component throughout.

This recognition of Dr. Penn's 35 years highlights sustained involvement in Jackson-area health care. The practice continues to serve families through a structured, patient-involved process focused on health expression and balance.

Penn Chiropractic Centre operates as a chiropractic practice in Jackson, MI. It provides adjustments, wellness technologies including PEMF and deep-tissue laser therapy, disc care with non-surgical decompression, and related guidance under Dr. Randolph Penn's direction.
