

BlackTom AI Offers University Test Bank with Real Exam Questions

May 01, 2026

KWUN TONG, HK - May 01, 2026 - PRESSADVANTAGE -

BlackTom AI has expanded its academic support platform with a university test bank feature that aggregates real exam questions from courses at institutions worldwide. The cloud-based system provides students with access to authentic quiz, midterm, and final examination materials derived from actual university curricula, rather than simulated practice problems.

The platform sources its content from a growing repository of course materials contributed by students who have used the service to study and review lectures. This crowdsourced approach allows the test bank to expand continuously as new courses are added and existing materials are refined with verified answers. The collaborative model enables students to benefit from shared resources across different institutions and academic programs. Students using the platform can access materials from courses similar to their own, regardless of geographic location or institutional affiliation.

The university test bank covers a range of academic disciplines and includes materials from institutions such as Arizona State University, University of California Berkeley, University of California Los Angeles, Cornell University, Carnegie Mellon University, University of Birmingham, City University of Hong Kong, and others.

Students can search for course-specific materials or browse by institution to find relevant exam preparation resources.

BlackTom AI's approach differs from traditional exam preparation services by focusing on authentic assessment materials. Rather than creating hypothetical questions that approximate exam difficulty, the platform collects and organizes questions that students actually encountered in their courses. This method aims to provide a more accurate representation of the format, scope, and difficulty level of university assessments.

The company, founded in 2024, has served over 60,000 students according to its published user statistics. Its broader platform includes AI-powered homework assistance tools, lecture review capabilities, and writing support in addition to the test bank feature. The company positions its services as complementary to formal education, providing supplementary resources for students seeking additional study materials outside their institutional learning management systems.

Access to the BlackTom university quiz bank is provided through the main BlackTom AI platform. Users can navigate to specific university sections or search for individual courses. The platform does not require institutional affiliation, making the materials available to students at any stage of their academic progression or from any geographic location.

The test bank feature expands access to academic resources by compiling materials from a wide range of institutions. The platform provides students with comparable access to assessment materials across different universities, offering insight into how similar courses are assessed in various academic contexts. The platform continues to expand its coverage as more students contribute materials from their respective courses and institutions.

"Our goal is simple," said a spokesperson for BlackTom AI. "We want every student to walk into their exam knowing exactly what to expect, not because they got lucky, but because they prepared with the right materials." The feature is designed to reduce the gap between classroom learning and exam preparation by giving students a clearer view of how knowledge is tested in real academic settings. By reviewing authentic past questions, students can identify recurring themes, understand instructor expectations, and prepare more effectively for timed assessments. This practical approach helps students focus their study efforts on the concepts and question formats most relevant to actual university exams.

About BlackTom AI: BlackTom AI operates an academic support platform at blacktom.com providing students with study tools and access to a university test bank featuring real exam questions from courses worldwide.
