

All In Tree Service of Jonesboro Shares 2026 Georgia Tree Trimming Cost Guide for Homeowners in Jonesboro and Clayton County

May 06, 2026

May 06, 2026 - PRESSADVANTAGE -

All In Tree Service of Jonesboro has published new guidance to help homeowners in Jonesboro, Clayton County, and surrounding Metro Atlanta communities better understand tree trimming cost in Georgia and what factors influence the final price. The company says many homeowners search online for terms like "how much does tree trimming cost," "tree trimming near Jonesboro, GA," and "Georgia tree pruning cost," but often find price ranges without enough explanation about why one job may cost far more than another.

According to the company's 2026 guide, most Georgia homeowners pay between \$300 and \$800 for professional tree trimming, although total pricing can range from around \$150 for a small ornamental tree to \$2,000 or more for a large hardwood near a structure. The company explains that tree size, canopy spread, access, branch density, obstacles, and overall tree condition all play a major role in determining the final estimate.

Tree trimming is one of those services where the homeowner usually wants a number first, but the real answer depends on the tree and the property," said Rudy Perez, owner of All In Tree Services and Pro. "A small tree in an open yard is a completely different project from a large oak hanging over a roof, driveway, or power line."

The company's pricing guide breaks tree trimming into practical size ranges that make estimates easier to understand. Small trees under 25 feet typically cost \$150 to \$400 to trim. Medium trees from 25 to 50 feet often fall in the \$300 to \$800 range. Large trees between 50 and 75 feet may run \$600 to \$1,200, while extra-large trees over 75 feet can cost \$1,000 to \$2,000 or more, especially when special rigging, climbing, or advanced safety procedures are required.

For homeowners researching tree trimming cost in Jonesboro, GA, the company says tree height is only one part of the equation. The spread of the canopy, the weight of the limbs, the species of tree, and the location of the branches all affect labor time and equipment needs. Dense hardwoods such as oaks, hickories, and maples generally take longer to trim than lighter ornamental species or softwoods. Trees growing over homes, garages, fences, driveways, or utility areas often require more careful lowering of branches, which increases labor and risk.

The company also notes that access can significantly affect pricing for tree trimming in Clayton County and surrounding neighborhoods. A tree with clear truck access on flat ground is typically less expensive than one tucked behind a fence line, near a retaining wall, or in a tight backyard where equipment placement is limited. If a crew must climb rather than use a bucket truck, or if limbs must be rigged down by rope instead of dropped into an open area, the cost can increase.

Another factor in Georgia tree trimming prices is tree condition. Dead, diseased, or storm-damaged limbs are often brittle and unpredictable, requiring more careful cuts and slower progress. A tree that has been neglected for years may also require more extensive crown cleaning, weight reduction, or structural pruning than a tree maintained on a routine schedule.

"Waiting too long usually makes tree trimming more expensive," Perez said. "When homeowners stay ahead of the growth, the job is simpler, faster, and safer. When they wait until branches are over the roof or deadwood is hanging over the driveway, the cost usually goes up."

The guide also distinguishes between tree trimming and tree pruning, two terms homeowners often use interchangeably in search. According to the company, trimming usually focuses on shape, clearance, and controlling overgrowth near homes, walkways, roofs, or driveways. Pruning is more targeted and often focuses on tree health, removing dead, damaged, diseased, or crossing branches to improve structure, airflow, and long-term stability. Many residential tree service jobs in Jonesboro include a mix of both.

For homeowners searching ?how often should trees be trimmed in Georgia,? the company says the answer depends on species and location. Hardwoods such as oak, maple, and hickory often benefit from trimming every 3 to 5 years. Ornamental trees such as crape myrtles, dogwoods, and flowering cherries usually need attention every 2 to 3 years. Fruit trees are typically pruned annually, while pines are often trimmed only as needed for clearance or dead limb removal. Trees near structures, roads, or power lines may require more frequent service.

The company also addresses the question of whether homeowners should trim trees themselves. For small trees under 15 feet with reachable branches, basic trimming from the ground may be manageable. But All In Tree Service of Jonesboro warns that ladders, chainsaws, dead limbs, and branches near roofs or power lines quickly turn routine yard work into a serious safety risk. The company says professional service is especially important for large trees, storm-damaged branches, and any job where property damage is a possibility.

For local homeowners, the value of professional trimming is not just appearance. Regular trimming can improve air circulation, reduce disease pressure, prevent branches from rubbing roofs or siding, lower storm failure risk, and help trees maintain a safer structure as they mature. In a climate like Georgia?s, where rapid seasonal growth and thunderstorms are both common, proactive tree trimming can also reduce the likelihood of emergency calls later in the year.

All In Tree Service of Jonesboro provides tree trimming in Jonesboro, GA, along with tree removal, stump grinding, pruning, and emergency tree service for residential and commercial properties. The company says many calls for trimming begin as cost questions but lead to broader conversations about roof clearance, storm preparation, property safety, and long-term tree health.

As more homeowners search online for tree trimming cost Georgia, Jonesboro tree trimming service, and how much does tree pruning cost, All In Tree Service of Jonesboro says locally relevant pricing guidance can help them make more informed decisions. By outlining realistic price ranges and explaining what affects a quote, the company aims to reduce confusion and help homeowners plan tree work before it becomes an emergency.

All In Tree Service of Jonesboro provides tree trimming, pruning, tree removal, stump grinding, and emergency tree service for residential and commercial properties in Jonesboro, Georgia, and surrounding areas. The company offers licensed and insured service, free estimates, and 24/7 emergency response for tree-related property hazards.
