Cool Blew Inc. Expands Commercial Evaporative Cooling Installation Services

July 07, 2026

Peoria, AZ - July 07, 2026 -
Cool Blew Inc., a Phoenix-based HVAC service provider, has announced the expansion of its commercial cooling services to meet increasing demand from businesses seeking energy-efficient climate control solutions throughout the Phoenix metropolitan area. The company, which has served Arizona since 2002, is responding to growing interest in evaporative cooling systems as businesses look for cost-effective alternatives to traditional air conditioning.

The expansion comes as commercial properties across Phoenix face rising energy costs and seek sustainable cooling options that perform effectively in Arizona's dry climate. Evaporative cooling systems, also known as swamp coolers, use water evaporation to cool air, consuming significantly less electricity than conventional vapor-compression systems while adding beneficial moisture to indoor environments.

"We're seeing unprecedented interest in commercial evaporative cooling installation in Phoenix as business owners recognize both the operational cost savings and environmental benefits these systems provide," said Scott Proctor, Operations Manager at Cool Blew Inc. "Our expanded service capacity allows us to meet this demand while maintaining the quality standards our commercial clients expect."

The company's enhanced commercial division now provides comprehensive cooling solutions including system design, installation, and ongoing maintenance for evaporative coolers alongside traditional commercial AC repair services. This integrated approach allows businesses to optimize their climate control strategies based on seasonal conditions and specific facility requirements.

Evaporative cooling technology has proven particularly effective for warehouses, manufacturing facilities, and retail spaces throughout the Phoenix area, where the low humidity levels create ideal conditions for this cooling method. The systems can reduce cooling costs by up to 75 percent compared to traditional air conditioning while maintaining comfortable indoor temperatures.

Cool Blew Inc. has also expanded its technical team to support the growing commercial sector, adding certified technicians specializing in large-scale evaporative cooling systems. The company maintains factory authorization from leading equipment manufacturers and holds industry certifications for both installation and service work.

"The key to successful evaporative cooling implementation lies in proper system sizing and professional installation," added Proctor. "Our team evaluates each commercial space individually to determine the optimal cooling solution, whether that involves evaporative cooling, traditional air conditioning, or a hybrid approach combining both technologies."

The expansion of commercial services complements Cool Blew Inc.'s existing residential offerings, which include heating, plumbing, electrical, and solar services throughout the greater Phoenix area. The company serves multiple communities including Scottsdale, Mesa, Gilbert, Tempe, Peoria, Surprise, Glendale, Sun City, and Chandler.

Cool Blew Inc. is a family-owned HVAC service provider established in 2002, serving residential and commercial customers throughout the Phoenix metropolitan area. The company specializes in air conditioning, heating, plumbing, and solar services, with a focus on energy-efficient solutions and preventative maintenance programs. As an authorized dealer for major equipment manufacturers, Cool Blew Inc. maintains industry certifications and Better Business Bureau accreditation while providing emergency service availability for critical cooling and heating needs.
