

All In Tree Service of Fayetteville Publishes Storm Damage Guide

May 14, 2026

FAYETTEVILLE, GA - May 14, 2026 -
All In Tree Service of Fayetteville has published a new blog guide on storm-damaged tree removal in Georgia, outlining what property owners should do after severe weather, what removal work may cost, and how insurance claims are commonly handled. The company said the resource was released as storm season drives renewed concern about fallen trees, damaged roofs, blocked driveways, and other safety risks across the state.

The new guide explains the first steps after a storm, including staying clear of damaged trees, watching for power line danger, checking for injuries, and documenting damage before cleanup begins. It also advises property owners to contact their insurer early and to avoid cutting or moving large storm-damaged trees without trained help, especially when a tree is resting on a structure or near utility lines.

?After a storm, people need clear information fast because the wrong move can make a dangerous situation worse,? said Alex Laldin, Marketing Director for All In Tree Service of Fayetteville. ?This guide was published

to help homeowners understand the first steps, the likely costs, and the insurance issues that often come up before removal work starts.?

The article gives example price ranges for common storm-related removal jobs in Georgia. It states that small trees or large limbs on the ground with no structure damage often run from $300 to $1,000, while a medium tree across a driveway or fence may range from $800 to $2,000. For a large tree on a roof or other structure, the guide lists a typical range of $1,500 to $5,000 or more, with added costs possible for utility coordination or crane work.

The company also uses the guide to explain how homeowners insurance often applies after a storm. According to the article, coverage usually applies when a tree hits a covered structure such as a house, garage, shed, or fence, while a tree that falls in a yard without striking a structure may have limited or no coverage depending on the policy. The guide notes that deductibles, per-tree limits, and total event caps can affect what an insurer will pay.

The published resource also describes the usual sequence of an emergency removal job. It says crews first inspect the tree and nearby hazards, then plan each cut based on weight and position, especially when a roof or wall is involved. The guide adds that cleanup usually includes removing branches, wood, and debris, while stump grinding is treated as a separate service unless added to the job.

Another section focuses on storm patterns that commonly damage trees in Georgia. The article points to severe thunderstorms and straight-line winds as a leading cause of broken limbs, snapped trunks, and uprooted trees, while ice storms, tornadoes, and tropical storm remnants can also create heavy tree loss. It highlights pines as especially vulnerable in high winds because of their height and root structure, and it notes that broad-canopy hardwoods can suffer major breakage during ice events.

The company also uses the post to address ways property owners can lower storm risk before bad weather hits. The guide recommends regular trimming, removal of dead or dying trees, and inspection of warning signs such as leaning trunks, cavities, root lift, and major limb cracks. It also advises property owners to inspect nearby trees after each storm because partial failure may not lead to an immediate fall.

The article includes practical guidance for the period after a tree has been removed. It recommends addressing stump grinding, coordinating structural repairs with the insurer and a licensed contractor, and checking nearby trees for hidden damage. The company said these follow-up steps can help prevent added property problems after the initial emergency has passed.

All In Tree Service of Fayetteville is part of All In Tree Services and Pro, a Georgia tree service company that provides tree removal, tree trimming, emergency tree removal, stump grinding, and shrub trimming for residential and commercial properties. The company website states that it offers 24/7 emergency tree service and serves areas across Metro Atlanta and North Georgia.
