

Cool Springs Foot Care Expands Advanced MLS Laser Therapy Program in Franklin, TN

May 11, 2026

FRANKLIN, TN - May 11, 2026 - PRESSADVANTAGE -

Cool Springs Foot Care is expanding its FDA-Cleared MLS Laser Therapy program to help patients throughout Franklin, Brentwood, Nashville, and Middle Tennessee find relief from chronic foot and ankle pain without surgery, injections, or extended downtime.

Led by triple board-certified podiatric surgeon Dr. Lance Reeves, the practice is using MLS Laser Therapy as part of its pledge to modern, patient-focused care that reduces inflammation, accelerates healing, and helps patients stay active. Patients searching for relief from the multiple causes of foot pain now have access to one of the most advanced therapeutic laser systems available in podiatric medicine.

MLS stands for Multiwave Locked System, a laser technology designed to deliver synchronized wavelengths of light energy deep into injured tissue. The therapy works by stimulating the body's natural healing process at the cellular level. Unlike many traditional pain treatments that simply mask symptoms, MLS Therapy is designed to reduce inflammation while improving circulation. pain signals will be decreased, and tissue repair

will be accelerated. Post-surgical healing is enhanced, and nerve recovery is supported. Treatments are non-invasive, painless, and typically require little to no downtime. This is appealing to many patients who are searching for non-surgical solutions that help them avoid long recovery periods that produce ongoing inflammation and activity limitations. Also, patients are drawn to a treatment that is fast, non-invasive, drug-free, and designed to work with the body's healing response.

According to Dr. Lance Reeves, many patients are seeking alternatives to medication or prolonged recovery plans. "Our goal is to help patients heal as naturally and efficiently as possible," said Dr. Reeves. "MLS Therapy gives us a great tool to reduce pain, calm inflammation, and support faster recovery while keeping patients active and moving."

Dr. Reeves utilizes FDA-Cleared MLS Laser Therapy as part of the practice's comprehensive restoration protocols. Patients that have required Minimally Invasive Surgery for bunion or hammertoe correction have found MLS Laser Therapy helpful in supporting post procedure healing while also enhancing patient mobility.

Cool Springs Foot Care is a leading podiatry practice in Franklin, Tennessee, dedicated to advanced foot and ankle care with a strong focus on minimally invasive treatment solutions, patient education, and compassionate care. The practice is led by Dr. Lance Reeves, a triple board-certified podiatric surgeon known for pioneering approaches to the treatment of foot and ankle conditions. Patients interested in learning more about MLS Laser Therapy in Franklin, TN, can contact Cool Springs Foot Care to schedule a consultation.
