Premium Landscape Supply Co. Enhances Central Texas Sustainable Development with New Regional Sourcing Initiative

May 12, 2026

BURNET, TX - May 12, 2026 - PRESSADVANTAGE -

Premium Landscape Supply Co. has officially announced a major expansion of its regional sourcing initiative to better serve the growing demand for sustainable and locally harvested materials in the Central Texas region. Since its establishment in 2014, the company has remained committed to providing hardscaping, irrigation, and lawn care products to a diverse clientele ranging from professional contractors to residential DIY enthusiasts. This latest initiative focuses heavily on the strategic acquisition of materials such as landscaping gravel in Burnet, TX, that homeowners and builders require for water-conscious xeriscaping and durable outdoor design. By prioritizing stones and aggregates quarried from the local Llano, Colorado, and Brazos rivers, the organization aims to reduce the need for long-distance hauling while offering materials that naturally complement the native Texas environment.

The expanded inventory features a sophisticated range of river gravels, including multi-colored pea gravel available in sizes ranging from 3/8-inch to 5/8-inch. These smooth, washed stones are noted for their versatile palette of pinks, browns, and tans, making them ideal for drainage solutions and decorative pathways. Furthermore, Premium Landscape Supply Co. has increased its stock of larger river rocks and bull

rock, which are frequently utilized in water features and erosion control. For projects requiring a more modern aesthetic, the company now offers an enhanced selection of Mexican moon pebbles and Colorado cobble, providing deep grays and variegated textures that are becoming staples in contemporary Zen gardens and minimalist landscape designs across the Burnet area.

In addition to rounded river stones, the company is highlighting the functional importance of crushed granite and limestone bases in structural landscaping. Locally sourced decomposed granite, available in both 1/4-inch and 1-inch minus sizes, serves as a foundational material for patios and driveways due to its superior packing capabilities and attractive gold-flecked coloration. The inclusion of Fairland pink granite gravel further diversifies the aesthetic options for those seeking durable, crushed stone with a distinct regional flair. Understanding that durability is a primary concern for Central Texas residents, the firm provides limestone products enriched with dolomite, ensuring long-lasting stability for parking areas and drainage ditches. This commitment to variety ensures that every project, regardless of scale, has access to the precise mineral composition required for both beauty and longevity.

Beyond the physical inventory, Premium Landscape Supply Co. continues to streamline the logistical process for its customers through a robust landscape supply delivery system. This service is designed to ensure that bulk soils, stones, and specialized irrigation components arrive safely and on schedule, typically within one to two business days. The company remains open to the public, offering a professional-grade experience to individual homeowners who are often looking for the same quality materials used by commercial contractors in their more expansive projects.

As Central Texas continues to experience rapid growth, Premium Landscape Supply Co. serves as an essential resource for maintaining the aesthetic and ecological integrity of the local landscape. The team's thirty-five years of combined industry experience allow them to provide expert guidance on material selection, so that every project uses the most cost-effective and visually appealing solution for the specific site conditions. Whether the goal is to improve drainage, reduce erosion risks, suppress weed growth, or create a stunning visual focal point using landscaping gravel in Burnet, TX, the local Burnet community trusts Premium Landscape Supply Co.
