Titan Barriers Releases Comprehensive Alberta Vehicle Incident Report Highlighting Commercial Property Protection Needs

May 15, 2026

EDMONTON, AB - May 15, 2026 -
Titan Barriers, a commercial safety and barrier solutions provider serving Alberta, has released a comprehensive Alberta vehicle incident report examining the growing frequency of vehicle-related incidents at commercial properties across the province. The report underscores the critical need for enhanced protective measures at retail plazas, warehouses, banks, and other commercial facilities throughout Calgary, Edmonton, Red Deer, Lethbridge, Fort McMurray, and Grande Prairie.

The detailed analysis reveals concerning trends in storefront crashes and pedestrian safety incidents at commercial properties, particularly affecting retail storefronts, convenience stores, liquor stores, and daycares. These findings highlight the importance of implementing proper vehicle mitigation strategies and protective barrier systems to safeguard both property and people.

"The data we've compiled demonstrates a clear pattern of preventable incidents occurring at commercial properties across Alberta," said Justin Ward of Titan Barriers. "From accidental storefront crashes to intentional ram-raid attempts, businesses need comprehensive protection strategies that go beyond traditional security measures. Our report provides valuable insights for property managers and business owners looking to enhance their facility protection."

The report examines various incident types, from accidental vehicle intrusions at retail plazas to deliberate hostile vehicle attacks targeting banks and government facilities. Industrial facilities and warehouses face unique challenges with loading dock incidents and internal traffic management issues that require specialized barrier solutions.

Commercial bollard installation emerges as a primary recommendation for protecting storefronts, pedestrian

walkways, and sensitive infrastructure. The report details how properly installed security bollards can prevent vehicles from breaching building perimeters while maintaining accessibility for customers and emergency services. Different bollard types, including fixed, removable, and crash-rated systems, offer varying levels of protection based on specific facility needs and threat assessments.

Beyond traditional bollard systems, the report addresses comprehensive hostile vehicle mitigation strategies essential for high-risk facilities. Banks, government buildings, and critical infrastructure require multi-layered protection approaches combining physical barriers, traffic flow management, and strategic site design to minimize vulnerability to vehicle-based threats.

The analysis also emphasizes the importance of regular site security assessments to identify vulnerabilities before incidents occur. Commercial properties in Edmonton and Calgary face unique urban challenges, while facilities in Red Deer, Lethbridge, Fort McMurray, and Grande Prairie must consider different traffic patterns and regional factors affecting their security needs.

Pedestrian safety remains a paramount concern, particularly at daycares, healthcare facilities, and retail locations with high foot traffic. The report recommends implementing dedicated pedestrian barriers, clearly marked walkways, and strategic bollard placement to create safe zones separated from vehicle traffic areas.

Titan Barriers specializes in commercial safety installations throughout Alberta, providing bollard systems, warehouse barriers, speed bump installation, line painting, and comprehensive site security assessments. The company serves various sectors including retail, industrial, healthcare, financial institutions, and government facilities across the province. With over 15 years of experience in commercial safety solutions, the company focuses on helping businesses protect their assets, employees, and customers from vehicle-related incidents through strategic barrier implementation and risk mitigation planning.
