

SRH Landscapes LLC Announces Expansion of Professional Tree Care Services Across Dallas and Surrounding Communities

May 14, 2026

DALLAS, TX - May 14, 2026 -
SRH Landscapes LLC, a long-established provider of commercial and municipal landscape solutions, has announced the introduction and expanded availability of its professional tree service offering across Dallas and several neighboring communities. The service is now being extended to additional areas, including Plano, Richardson, Lake Highlands, Highland Park, University Park, Carrollton, Farmers Branch, Valley Ranch, Prestonwood, Vickery Meadow, and Far North Dallas.

The announcement reflects a recent operational development within the company?s service portfolio, aligning with growing demand for structured tree care and maintenance across commercial properties, public spaces, and managed landscapes. SRH Landscapes LLC, headquartered in Dallas, has built its reputation through decades of work in landscape architecture, site planning, and long-term grounds management.

Tree service has long been considered a supporting component of landscape maintenance programs.

However, industry shifts toward proactive plant health care, regulatory compliance, and risk mitigation have elevated its role within comprehensive landscape strategies. In response, SRH Landscapes LLC has formalized and expanded its tree care operations, integrating arboricultural practices with broader landscape maintenance and environmental management systems.

The service includes a range of professional activities such as tree trimming, pruning, removal, health assessments, and structural support through cabling and bracing. Additional elements address disease treatment, pest control, root aeration, and soil amendment, all of which help maintain tree vitality in urban and commercial environments. These processes are designed to align with recognized industry practices, including standards for tree care and safety.

According to the company, the expanded service is structured to support a wide range of property types, including corporate campuses, municipal facilities, retail developments, and managed public spaces. These environments often require coordinated planning to ensure that tree populations remain safe, healthy, and compliant with local ordinances.

Tyler Hawkins, owner of SRH Landscapes LLC, commented on the announcement: ?Tree care has become an essential part of how properties are managed in North Texas. With changing weather patterns and increased expectations around safety and environmental stewardship, structured tree service is no longer optional for many sites. This expansion allows SRH Landscapes LLC to provide a more integrated approach that connects tree health, landscape maintenance, and long-term site planning.?

The expansion comes at a time when urban forestry practices are receiving increased attention across Texas. Municipal codes, tree preservation ordinances, and environmental regulations have placed greater emphasis on maintaining tree canopy coverage and protecting existing vegetation. For commercial and government properties, compliance with these requirements often involves regular inspection, documentation, and maintenance of trees across large areas.

SRH Landscapes LLC?s approach incorporates tree risk assessment as a central component. This process evaluates structural integrity, canopy balance, and potential hazards associated with branches or root systems. By identifying concerns early, property managers can address issues before they result in damage, safety incidents, or regulatory violations.

Another key aspect of the service involves storm damage response and preventative care. Severe weather conditions, including high winds and heavy rainfall, can place stress on trees and surrounding soil structures. The company?s services include inspection protocols following major weather events, as well as pruning and stabilization techniques to reduce vulnerability.

The operational framework also integrates closely with irrigation systems and soil management practices. Tree health is influenced by factors such as water distribution, soil composition, and drainage conditions. By coordinating tree service with irrigation audits and turf management programs, SRH Landscapes LLC aims to support more consistent plant performance across entire properties.

In addition to technical considerations, the service addresses aesthetic and functional aspects of landscape design. Trees contribute to shade, spatial definition, and overall site character. Regular pruning and canopy management help maintain visual balance while supporting pedestrian and vehicle accessibility and safety.

The expansion into additional service areas is supported by the company?s existing infrastructure and workforce. SRH Landscapes LLC operates with a full-time team trained in landscape construction, maintenance, and horticulture practices. This structure allows for consistent service delivery across multiple locations and property types.

The company?s history in Texas landscaping dates back to 1955, when it began providing services focused on long-term site development and maintenance. Over the decades, SRH Landscapes LLC has worked on numerous commercial and civic projects, building experience in managing large-scale environments where tree care is one component of a broader system.

Industry observers note that integrating tree services into comprehensive landscape programs reflects a broader trend in landscape architecture and property management. Rather than treating tree care as a separate task, many organizations are moving toward coordinated approaches that consider planting, grading, irrigation, and maintenance as interconnected elements.

SRH Landscapes LLC?s expansion is positioned within this context, emphasizing coordination between tree service and other landscape functions. The company reports that its planning process includes site analysis, evaluation of existing vegetation, and development of maintenance plans tailored to each property?s conditions.

The newly expanded service is available immediately across the listed service areas. Property managers, municipal departments, and commercial stakeholders can access the service as part of ongoing maintenance programs or as a standalone solution for specific tree care needs.

As urban development continues across the Dallas region, the role of structured tree service is expected to remain significant. Trees not only contribute to environmental quality but also influence property usability, safety, and long-term maintenance costs. By expanding its capabilities in this area, SRH Landscapes LLC is responding to evolving requirements within both public and private sectors.

For further information, SRH Landscapes LLC is based in Dallas, Texas, and continues to provide a range of landscaping services, including commercial landscape design and construction, irrigation and drainage management, landscape maintenance, hardscaping, and government landscape projects.
