Summit Scapes Construction Offers Seawall Installations as an Established Hardscaping Company

May 14, 2026

MANLIUS, NY - May 14, 2026 -
Summit Scapes Construction, a hardscaping company serving Central New York, offers seawall installations to protect shoreline properties from erosion and water damage. These installations provide structural support for properties located near lakes, ponds, and waterways common in Onondaga County and surrounding areas.

The hardscaping company designs and builds seawalls using materials selected for durability in local water and soil conditions. Installations address wave action, fluctuating water levels, and ice pressure experienced during Central New York winters. Project scopes typically range from $30,000 to $80,000, depending on length, height, and site complexity.

Site preparation includes excavation and grading to establish stable foundations before wall construction. The hardscaping company coordinates with drainage systems to manage water flow behind the seawall structure. This integration helps prevent soil saturation and maintains long-term stability of the installation.

Seawalls serve both protective and aesthetic functions. Many designs incorporate natural stone facing or

plantings along the top to blend with surrounding landscape features. The structures create defined property boundaries while preserving access to the water for recreational use.

With 13 years of experience in Manlius and nearby communities, the hardscaping company applies regional knowledge to each seawall project. Full insurance coverage applies to all installations. A one-year warranty covers materials and workmanship, with upgrade options available for extended protection.

Additional sitework often accompanies seawall projects. These efforts include shoreline grading, boulder placement, and vegetation stabilization to enhance erosion control. Pool hardscape and stonework near waterfront areas coordinate with seawall designs for unified property layouts.

Commercial and residential properties benefit from the added protection during high-water periods. The hardscaping company tailors each seawall to specific shoreline contours and exposure levels. Timelines for standard installations range from one to two weeks, depending on site access and environmental factors.

Backyard areas adjacent to seawalls frequently incorporate complementary features such as walkways or retaining walls. These elements connect the protected shoreline with the main property spaces. Tree and shrub placements near the structures provide natural buffering and visual integration.

The hardscaping company maintains equipment suited for waterfront work, including excavation tools for precise material handling. Safety protocols address working conditions near water. All projects comply with local regulations regarding shoreline modifications.

"Properly installed seawalls help property owners maintain usable shoreline while protecting their investment from ongoing erosion," said Jared Van Der Veer, Owner of Summit Scapes Construction.

Spring and fall clean-up services offered by the company extend to areas around seawall installations. These maintenance activities remove debris and monitor structure performance after seasonal changes. Mulch installation and plant care in adjacent beds support overall landscape health.

The installations contribute to property resilience in areas subject to more than 100 inches of annual snowfall and associated ice movement. Permeable elements in nearby hardscaping allow water management that complements seawall functions.

"Each seawall project starts with a detailed site assessment to match the solution to the specific water and soil dynamics," continued Van Der Veer.

Summit Scapes Construction continues to refine techniques based on performance data from completed

waterfront projects. The hardscaping company serves properties across Onondaga, Madison, and Oswego counties, providing customized shoreline protection solutions.

Summit Scapes Construction is a hardscaping and landscape company in Manlius, New York, specializing in creating outdoor spaces. The firm offers services ranging from landscape installation to snow removal, serving both residential and commercial clients in Central New York.
