

Board-Certified Orthodontist Dr. Michael Sawaf Highlights the Role of Advanced Technology in Modern Orthodontic Care

May 19, 2026

NEW YORK, NY - May 19, 2026 - PRESSADVANTAGE -

SummitBridge Communications reports that advances in orthodontic technology continue to expand treatment options for patients seeking both improved dental health and enhanced facial aesthetics.

Orthodontics has evolved significantly over the past several decades, with new diagnostic tools, digital imaging systems, and treatment planning technologies enabling more precise and efficient care. Industry professionals note that modern orthodontic treatment often focuses not only on aligning teeth, but also on supporting balanced facial structure, functional bite relationships, and long-term oral health.

Within this changing landscape, Dr. Michael Sawaf has established a professional practice centered on board-certified orthodontic care and the integration of advanced technologies into patient treatment. Certified by the American Board of Orthodontics (ABO), Dr. Sawaf provides orthodontic services designed to address dental alignment and dentofacial orthopedic concerns.

Dentofacial orthopedics is a specialty that involves the diagnosis and correction of irregularities affecting the teeth, jaws, and facial structure. Treatment may be recommended for children, adolescents, and adults, depending on individual needs and clinical findings.

Dr. Sawaf earned his Doctor of Dental Medicine (D.M.D.) degree from the Boston University School of Dentistry in 1995. Following graduation, he completed licensing examinations that qualified him to practice dentistry and began a professional career that included military service and advanced specialty training.

A significant chapter in his career was his service as a United States Navy officer. During his military tenure, Dr. Sawaf served at the Naval Medical Center in San Diego, where he held the position of Assistant Director in the General Practice Residency Program. In this role, he contributed to the education and mentorship of dental professionals while expanding his clinical experience across multiple areas of dentistry.

Dr. Sawaf later completed an orthodontic residency at Jacksonville University, earning a Certificate of Advanced Graduate Study (C.A.G.S.) in 2006. He achieved board certification from the American Board of Orthodontics in 2007 and subsequently completed recertification processes in 2012 and 2020.

Board certification is a voluntary credential that reflects advanced examination and evaluation within the orthodontic specialty. Industry observers note that this certification demonstrates an ongoing commitment to maintaining professional standards and continuing education.

Dr. Sawaf is licensed to practice in Tennessee, Kentucky, Alabama and Georgia. He serves patients at Cool Springs Orthodontics in Franklin, Tennessee, and has also provided care through additional practices in the region, including DOCS Dental at Fort Campbell.

According to colleagues and patients, Dr. Sawaf is recognized for his organized treatment planning and clear communication. These qualities play an important role in orthodontic care, where successful outcomes often depend on patient understanding, regular follow-up, and individualized treatment coordination.

Technology remains a central component of Dr. Sawaf's professional approach. Digital imaging, advanced diagnostic systems, and innovations such as 3D printing have expanded the capabilities of orthodontic treatment, allowing for more customized and precise planning.

Dr. Sawaf has also written about developments in the dental industry, including the potential applications of artificial intelligence and digital manufacturing technologies. These tools continue to influence treatment workflows and broaden the range of options available to patients.

His professional affiliations include the American Board of Orthodontics, the American Association of Orthodontists, the Southern Association of Orthodontists, the Tennessee Dental Association, and the American Dental Association. Participation in these organizations supports ongoing engagement with research, education, and developments within the field.

Outside of his clinical work, Dr. Sawaf maintains an active lifestyle and participates in triathlon events involving swimming, cycling, and running. He is also a longtime soccer enthusiast and enjoys golf, travel, and spending time with his family.

Healthcare professionals note that orthodontic care increasingly combines clinical expertise with technological innovation and individualized planning. Practitioners who emphasize continuing education and advanced treatment methods are helping shape the future of the specialty.

Dr. Michael Sawaf's professional background reflects this combination of education, military service, board certification, and technology-focused practice. Through his work in orthodontics and his continued interest in emerging technologies, he remains actively engaged in supporting modern approaches to dental and facial care.

About Dr. Michael Sawaf

Dr. Michael Sawaf is a board-certified orthodontist serving patients in Franklin, Tennessee, and other locations throughout the region. His practice focuses on orthodontics and dentofacial orthopedics, with an emphasis on advanced technology, individualized treatment planning, and ongoing professional education.
