

Alpha Plumbing, Heating & Cooling Expands Water Filtration System Options for Bloomington Homes

May 19, 2026

BLOOMINGTON, MN - May 19, 2026 - PRESSADVANTAGE -

Alpha Plumbing, Heating & Cooling has expanded its water filtration system services to help homeowners in the Twin Cities area address local water quality concerns. Minnesota municipal water supplies, while treated, can contain minerals, chlorine, and other elements that affect taste, odor, and appliance performance over time. The company now offers installation and maintenance of filtration systems, including reverse osmosis units, as part of its residential plumbing services.

Plumbing services in Bloomington, MN, include water filtration system installation alongside traditional plumbing work. Technicians evaluate water conditions and recommend solutions tailored to household needs. Reverse osmosis systems filter water at the point of use, typically under the kitchen sink, removing a range of impurities through a multi-stage process. These systems produce cleaner drinking water directly from the tap.

Whole-home water softeners and filtration setups address hardness and sediment issues that impact plumbing fixtures, water heaters, and appliances. Hard water, common in the region, can lead to scale buildup, reducing efficiency and shortening equipment lifespan. Filtration options help manage these effects

by treating water before it circulates through pipes and fixtures.

The company handles complete installation processes, including proper connection to existing plumbing lines and testing for correct operation. Maintenance services cover filter replacements and system checks to sustain performance. Technicians also perform water quality testing during visits to identify specific contaminants or mineral levels present in a home's supply.

This expansion builds on the company's existing plumbing capabilities. Fixture installations, leak repairs, water heater services, and drain cleaning remain core offerings. Gas line work, sewer inspections with camera technology, hydro-jetting for clogs, and trenchless pipe replacements continue without interruption. Heating and cooling repairs for furnaces and air conditioning units round out the service portfolio.

Technicians complete most jobs during the initial visit when parts are available. Free estimates support planning for new heating and cooling systems or larger filtration projects. A one-year warranty applies to parts and labor on completed installations and repairs. Pricing uses an upfront quote system for transparency before work starts.

Customer feedback includes accounts of water-related services. One reviewer described a pipe repair with clear explanations of the issue and maintenance recommendations. Another noted a water heater replacement paired with kitchen plumbing work during a renovation, mentioning responsiveness and part selection. Additional comments highlighted thorough inspections and next-day scheduling for maintenance calls.

Alpha Plumbing, Heating & Cooling serves residential customers across the Twin Cities metropolitan area. Service extends to St. Paul, Minneapolis, Woodbury, Plymouth, Eden Prairie, White Bear Lake, Stillwater, Edina, Brooklyn Park, Burnsville, Eagan, Apple Valley, Fridley, Coon Rapids, Roseville, Lakeville, Minnetonka, Shakopee, Anoka, and Bloomington.

"Water filtration systems can make a noticeable difference in daily water use," said Chad Olson, owner of Plumber at Alpha Plumbing, Heating & Cooling. "Installation involves integrating the unit safely into existing plumbing while ensuring proper flow and pressure."

"Testing helps determine which filtration approach fits a specific home's water profile," continued Olson. "Reverse osmosis units target drinking water, while other systems treat the entire household supply."

The company operates as a locally owned and independent business in Bloomington. This structure supports technician training across plumbing, heating, cooling, gas, drain, and water treatment tasks. Decisions focus on providing options that match homeowner requirements in the local climate and water conditions.

Water quality varies by location and home age, with older pipes sometimes contributing additional factors. Regular system checks, including those available through maintenance plans, allow homeowners to monitor conditions. The addition of filtration services gives residents more tools to manage water-related aspects of home maintenance.

Alpha Plumbing, Heating & Cooling continues to deliver residential solutions in plumbing and HVAC. The expanded water filtration offerings address a growing interest in improving water taste and protecting household systems from mineral effects common in the area.
