

STAPLERMAXX Expands Swiss Warehouse Equipment Range with Advanced Electric Reach Trucks and High-Lift Stackers

June 19, 2026

OFTRINGEN, CH - June 19, 2026 -

STAPLERMAXX, the Oftringen-based material handling equipment provider, has expanded its product portfolio with a comprehensive range of electric reach trucks and high-lift stackers designed to meet the evolving requirements of Swiss warehouse operations. The expansion addresses growing demand from logistics and distribution centers seeking efficient vertical storage solutions while maintaining commitment to sustainable equipment choices.

The new equipment range includes electric reach trucks with lifting capacities from 1.4 to 2.5 tons and maximum lifting heights up to 12 meters, alongside high-lift stackers offering precise load handling for narrow aisle configurations. These additions complement STAPLERMAXX's existing fleet of electric forklifts, pallet trucks, and warehouse equipment, providing Swiss businesses with comprehensive material handling solutions from a single supplier.

According to STAPLERMAXX, the expansion responds directly to transformation occurring within Swiss logistics facilities, where maximization of vertical storage space has become essential for operational efficiency. Modern distribution centers and e-commerce fulfillment operations require equipment capable of accessing high-level racking systems while maintaining safety standards mandated by SUVA regulations.

Swiss warehouse operators face increasing pressure to optimize storage density while reducing operational costs and environmental impact, says STAPLERMAXX. Their expanded range of electric reach trucks and high-lift stackers aims to provide the technology needed to achieve these objectives, with equipment that delivers both performance and sustainability benefits.

The electric reach trucks feature advanced battery technology enabling full-shift operation without requiring mid-shift charging, addressing concerns about productivity interruptions common with earlier electric equipment generations. Regenerative braking systems extend operating time while reducing energy consumption, contributing to lower total ownership costs compared to traditional combustion-powered alternatives.

High-lift stackers in the expanded range offer versatility for operations requiring frequent load handling at varying heights. These units prove particularly valuable in retail distribution centers and manufacturing facilities where inventory turnover rates demand flexible equipment capable of adapting to changing storage configurations. The STAPLERMAXX team ensures each unit undergoes comprehensive Swisslifter-certified safety inspections before delivery, guaranteeing compliance with Swiss workplace safety requirements.

The expansion coincides with broader industry trends toward electric material handling equipment adoption across Switzerland. Environmental regulations in Swiss municipalities increasingly restrict diesel and LPG equipment usage, particularly in enclosed warehouse environments. Electric alternatives eliminate emissions while significantly reducing noise levels, creating improved working conditions for warehouse personnel.

STAPLERMAXX forklift experts provide consultation services helping businesses select appropriate equipment configurations based on specific operational requirements. The company maintains its complete inventory at its 6,000 square meter facility in Oftringen, ensuring immediate availability for both purchase and rental options. This approach enables businesses to quickly implement equipment upgrades without extended lead times that could impact operational continuity.

STAPLERMAXX specializes in lifting and conveying technology solutions for Swiss businesses across logistics, manufacturing, and construction sectors. The company maintains partnerships with leading manufacturers including HANGCHA FORKLIFTS while providing comprehensive support services including

operator training, maintenance programs, and spare parts supply. As a member of the Swiss Hubstapler Verband Swisslifter, STAPLERMAXX adheres to industry standards for equipment safety and service quality.
