

Holton Electric Strengthens Support for Minnesota Healthcare Facilities with Specialized Electrical Solutions

May 19, 2026

Saint Paul, Minnesota - May 19, 2026 - PRESSADVANTAGE -

Holton Electric, a commercial electrical contractor in Minnesota, is highlighting its specialized electrical services tailored for healthcare facilities across the state. This focus addresses the critical need for reliable, compliant, and uninterrupted power systems in hospitals, clinics, surgical centers, and long-term care environments where patient safety and operational continuity are paramount.

Healthcare facilities demand an electrical infrastructure that operates flawlessly under strict regulatory standards. Holton Electric provides comprehensive design, installation, and maintenance solutions that support life-saving equipment, emergency systems, and daily operations while minimizing disruptions in active medical settings.

Key services include robust electrical infrastructure for nurse call systems, patient monitoring, diagnostic imaging equipment such as MRI and CT scanners, laboratory automation, and IT/server room power management. The company ensures all installations meet or exceed National Electrical Code (NEC), NFPA 99, and Authority Having Jurisdiction (AHJ) requirements. Emergency power solutions form a cornerstone of

their healthcare offerings, encompassing generator installations, transfer switches, uninterruptible power supplies (UPS), battery backups, and redundant feeds for critical areas like operating rooms and intensive care units.

Patient room electrical systems receive particular attention, with installations for bed outlets, headwall power, specialized lighting, communication systems, and medical equipment outlets featuring GFCI and isolation panels. Work in occupied areas follows rigorous infection control protocols, including ICRA compliance, HEPA filtration, negative air pressure containment, and dust barrier systems to protect patients and staff.

In operating rooms and imaging suites, Holton Electric delivers precision wiring for surgical lighting, ceiling-mounted booms, specialized circuits for anesthesia and monitoring, equipment grounding, isolated power systems, and surge protection. These sensitive environments require clean, reliable power to support high-tech medical procedures without compromise.

Preventative maintenance programs customized for healthcare include thermal imaging, load testing, panel inspections, generator and UPS servicing, and emergency lighting checks. Compliance support covers detailed documentation, arc flash studies, coordination studies, and reports to help facilities remain audit-ready for The Joint Commission, CMS, and other regulatory bodies.

The company's 24/7 emergency response capabilities ensure rapid resolution of electrical faults, generator issues, or life-safety outages, which is essential in environments where power interruptions can have serious consequences.

Ted LaFrance, President of Holton Electric, stated, "Healthcare facilities represent unique environments where electrical reliability directly impacts patient care and safety. Our team approaches every project with the understanding that these are spaces of healing, requiring meticulous attention to detail, strict adherence to protocols, and solutions built for continuous operation."

LaFrance added, "We work as an extension of facility management teams, coordinating carefully to maintain infection control and minimize any impact on daily activities. This collaborative approach allows us to deliver systems that not only meet today's needs but support future expansions in medical technology."

Founded in 2007 and strengthened by its 2020 integration with A-1 Electric Service (established in 1982 in Waconia), Holton Electric combines decades of commercial and industrial electrical expertise. The locally team-operated company serves the Twin Cities metro area and beyond, emphasizing workmanship, integrity, transparency, and thorough communication.

Client feedback consistently praises the team's knowledge, respect for operations, quality workmanship, and

ability to accommodate urgent scheduling needs without shortcuts. This reputation supports Holton Electric's role as a trusted partner for Minnesota's healthcare community.

Services extend to infrastructure upgrades for medical technology growth, energy-efficient lighting retrofits, communication and security system enhancements, and facility electrical audits. The company's experience spans hospitals, outpatient clinics, surgical centers, long-term care facilities, dental offices, and behavioral health centers.

By prioritizing safety-first practices, code compliance, and long-term partnerships, Holton Electric helps healthcare providers maintain environments focused on healing, hope, and human connection. Their work ensures electrical systems enhance rather than hinder the vital mission of Minnesota's medical facilities.

As demands on healthcare infrastructure evolve with advancing technology and regulatory requirements, Holton Electric remains committed to delivering innovative, dependable electrical solutions that support operational excellence and patient-centered care across the state.

Holton Electric is a commercial and light industrial electrical contracting company based in Minnesota. It provides professional electrical services to healthcare facilities and other businesses and institutions throughout the region with an emphasis on reliability, safety, and client collaboration.
