

Landscapes Unlimited Completes Retaining Wall Project

May 19, 2026

INVER GROVE HEIGHTS, MN - May 19, 2026 - PRESSADVANTAGE -

Landscapes Unlimited, a family-owned and operated full-service landscaping company serving the Twin Cities metro area, has completed a retaining wall installation for a residential client in Woodbury, Minnesota. The project focused on slope stabilization and improved backyard functionality through integrated hardscaping elements.

This standalone residential effort addressed site-specific grading challenges common in the region. The installation used materials suited to Minnesota's freeze-thaw climate, incorporating structural elements designed for long-term stability. Proper drainage solutions were integrated to manage water flow and prevent soil pressure buildup behind the wall. The work followed the company's standard residential design-build process, which includes initial consultation, detailed design development, material selection, permitting where required for walls over four feet, and phased construction.

"Projects like this one allow us to apply practical solutions that improve property usability while maintaining structural integrity," said Casey H. Director of Design & Build at Landscapes Unlimited. "We worked closely with the homeowner to create a design that met their needs for slope management and outdoor space

expansion. The result is a durable retaining wall that enhances both safety and the overall landscape.?

Landscapes Unlimited offers residential and commercial retaining walls in materials such as limestone, granite, fieldstone, segmental block, and boulder systems. Limestone provides natural charm and versatility with earthy tones ranging from warm creams to soft greys, while granite delivers superior strength, low maintenance, and resilience against harsh weather. Fieldstone offers rustic appeal with customizable shapes and colors that blend organically into the landscape. Concrete block systems provide engineered durability and cost-effective performance, and boulder walls bring organic aesthetics with significant mass for erosion control. These installations support properties across Woodbury, Minneapolis, Saint Paul, Minnetonka, Lake Minnetonka, and surrounding communities.

The company?s full range of services includes landscape design and build, paver patios and walkways, outdoor living features such as kitchens and fireplaces, pool projects and decks, landscape lighting, irrigation systems, and ongoing maintenance programs including mowing and seasonal clean-ups. Additional services cover snow and ice management for year-round property care in the variable Minnesota climate.

A Woodbury client provided feedback on a comparable patio project: ?Overall, a great experience working with LU for our patio installation. The project was on budget and completed on time within the scope of their control. I would recommend their services.?

The company incorporates sustainable practices in project planning and execution, selecting regionally appropriate materials and designs that support proper drainage, erosion control, and reduced environmental impact. Limestone and fieldstone options, in particular, utilize locally sourced natural materials. Landscapes Unlimited operates from its headquarters in Inver Grove Heights, with additional locations in Andover, Corcoran, Maple Grove, and a design studio in Deephaven. Flexible financing options help clients manage project costs without compromising on quality or design.

This Woodbury retaining wall installation adds to the company?s portfolio of completed work in the Twin Cities region. It demonstrates the firm?s approach to detailed planning and on-site execution for challenging sites, including geotechnical considerations, reinforced foundations where needed, and compliance with local building codes. Landscapes Unlimited continues to focus on delivering functional outdoor improvements tailored to local soil conditions and climate requirements. The company is currently hiring for design, build, and maintenance positions to support growing demand.

?Client collaboration remains central to our process,? Casey added. ?We aim to deliver functional outdoor improvements that align with property conditions and homeowner goals, creating spaces that provide long-term value in Minnesota?s variable weather.?
