

Aloha Pavers & Concrete Announces Expanded Focus on Driveway Installation Services for Weather-Damaged Surfaces

May 21, 2026

OREM, UT - May 21, 2026 -
Aloha Pavers & Concrete, a hardscaping specialist serving Utah County, Salt Lake County, and Wasatch County, has announced an expanded focus on driveway installation and replacement services to address the growing need for solutions to cracked, shifting, and weather-worn exterior surfaces throughout the region.

The company's enhanced emphasis on driveway transformations comes as homeowners increasingly seek durable alternatives to traditional concrete slabs that deteriorate under Utah's freeze-thaw cycles and salt exposure. The specialized service offerings include both interlocking paver systems and custom concrete installations, each engineered to withstand the region's challenging climate conditions.

"Driveways take significant abuse from weather, vehicle traffic, and ground movement, yet they're often the last exterior feature homeowners consider upgrading," said Nate Chandler of Aloha Pavers & Concrete.

"We're seeing more property owners recognize that a properly installed driveway using modern materials and techniques can last decades longer than traditional approaches while significantly improving curb appeal."

The company's driveway installation process emphasizes proper base preparation and drainage management, critical factors in preventing the settling and cracking that plague many residential driveways. Interlocking pavers offer particular advantages in Utah's climate, as individual units flex with ground movement rather than cracking like solid slabs. These systems also provide superior resistance to salt damage and allow for easy repairs if individual sections become damaged.

For homeowners preferring concrete surfaces, Aloha Pavers & Concrete in Orem offers custom installations with various finish options including smooth, textured, and stamped patterns. The company's concrete work incorporates advanced base compaction techniques designed to minimize settling and extend surface life.

As a certified installer for manufacturers including Belgard, Techo-Bloc, and Unilock, the company maintains access to premium materials backed by manufacturer warranties. This certification ensures installations meet industry standards for structural integrity and longevity.

The expanded driveway focus complements the company's comprehensive hardscaping services, which include paver patio installation, retaining wall construction, outdoor kitchen builds, fire pit installation, and walkout basement transformations. Each service area benefits from the same attention to structural engineering and drainage management that characterizes their driveway work.

The company offers flexible financing options for major hardscape projects, recognizing that driveway replacement represents a significant investment in property improvement. Initial consultations include material samples, design options, and detailed project scopes to help homeowners make informed decisions about their exterior improvements.

Aloha Pavers & Concrete operates as a full-service hardscaping contractor specializing in structural stone and concrete installations throughout Utah County and surrounding areas. The company maintains certifications with leading hardscape manufacturers and focuses on delivering engineered solutions for residential exterior improvements. Their service portfolio encompasses driveways, patios, retaining walls, outdoor living features, and comprehensive landscape hardscaping projects.
