

HRC Climate Services Heating and Cooling Announces Comprehensive HVAC Support for New Residential Construction Projects

May 21, 2026

SPANISH FORK, UT - May 21, 2026 -
HRC Climate Services Heating and Cooling has announced its comprehensive HVAC construction support services for new residential builds throughout Utah County, emphasizing system design, installation, load calculations, commissioning, and adherence to current Utah energy code requirements.

The family-owned HVAC company, which has served Utah County for over three decades, provides specialized support for builders and contractors working on new residential construction projects. The service encompasses complete HVAC system planning from initial design through final commissioning, ensuring new homes meet both comfort standards and regulatory compliance.

"New construction projects require precise HVAC planning to ensure systems are properly sized and installed according to current energy codes," said Alisha Casey, Project Coordinator at HRC Climate Services Heating and Cooling. "Our team works closely with builders from the blueprint stage through final inspection, providing

load calculations that determine the exact heating and cooling requirements for each unique floor plan and ensuring all installations meet Utah's energy efficiency standards."

The comprehensive construction support service addresses a critical need in Utah County's growing residential development sector. With new housing developments expanding throughout the region, builders require experienced HVAC partners who understand both the technical requirements of modern heating and cooling systems and the regulatory landscape governing new construction.

HRC Climate Services Heating and Cooling in Spanish Fork specializes in calculating precise heating and cooling loads for new homes, a crucial step that determines the appropriate equipment size for optimal efficiency and comfort. The company's technicians evaluate factors including square footage, insulation levels, window placement, and local climate conditions to specify systems that provide consistent temperature control while minimizing energy consumption.

The commissioning process provided by the company ensures all HVAC components function correctly before homeowners take possession. This includes verifying proper airflow, checking refrigerant levels, testing thermostats and controls, and confirming that all safety features operate as designed. The thorough approach helps prevent common issues that can arise when HVAC systems are improperly installed or configured.

Beyond traditional forced-air systems, the company also installs heat pumps, ductless mini-split systems, and other energy-efficient alternatives that may better suit specific construction projects. The team stays current with evolving building codes and energy efficiency standards, helping builders navigate compliance requirements while selecting appropriate equipment for each project.

The company's new construction services complement its existing residential and commercial HVAC offerings, which include emergency repairs, routine maintenance, and equipment replacement. With 24/7 emergency service availability, the company has established itself as a reliable partner for both builders and homeowners throughout Utah County.

HRC Climate Services Heating and Cooling operates from its Spanish Fork location, providing residential services including AC installation, furnace repair, heat pump installation, HVAC maintenance, humidification services, ductless mini-split installation, UV air purifier installation, and gas log fireplace repair. The company also offers comprehensive commercial services including commercial refrigeration, rooftop unit installation, and large evaporative cooler installation for businesses throughout the region.
