

Sprayman Targets Gaps and Cracks with Foam Sealant Products

June 04, 2026

June 04, 2026 -

Sprayman has announced a targeted foam sealing initiative for homeowners as summer cooling season begins, addressing a source of energy loss that the U.S. Department of Energy estimates accounts for up to 30 percent of a home's heating and cooling energy consumption. The Virginia-based company is directing attention to small but significant air leaks around windows, doors, pipes, and electrical penetrations as a primary factor behind rising summer utility bills.

As temperatures rise and air conditioning systems work harder to maintain indoor comfort, gaps and cracks in the building envelope allow conditioned air to escape while drawing outdoor heat inside. Unlike large-scale insulation projects that typically require professional installation, these air leakage points can be addressed by homeowners in a single afternoon using appropriate foam sealant products. Common leak locations include window and door frames, rim joists, pipe penetrations through walls and floors, and gaps around electrical boxes.

Sprayman's foam sealant product line offers specialized formulations for different sealing needs rather than a single general-purpose solution. The lineup includes a gaps and cracks filler for standard sealing applications, a pest blocker foam designed to prevent insect and rodent entry points, and a fire block foam engineered specifically for penetrations near electrical and mechanical systems. Each formulation addresses a distinct sealing requirement while maintaining accessibility for both professional contractors and DIY users.

"Summer represents the ideal time for homeowners to address air leakage issues, as higher cooling bills make the impact immediately apparent," said a Sprayman spokesperson. "Sprayman's range provides specific solutions for different applications around the home, from basic gap filling to fire-rated penetration sealing, so homeowners can select the appropriate product for their particular needs."

The foam sealants adhere to multiple surfaces including drywall, brick, concrete, wood, and metal, making them suitable for both interior and exterior applications. Available in straw and gun applicator formats to accommodate different project scales, the products carry mold-proof and waterproof properties that extend performance beyond basic air sealing. Rim joists, attic hatches, and plumbing chases represent additional high-impact areas where the sealants can deliver measurable reductions in conditioned air loss.

Homeowners and contractors can explore the complete Sprayman foam sealant products collection and access application guidance through Sprayman on Facebook, where project examples and installation tips are regularly shared.

Based in Chantilly, Virginia, and managed by Lotus Global Trade LLC, Sprayman provides spray foam insulation and sealant products for residential and commercial applications, serving both professional contractors and DIY users across the United States.
