

# Elite Water Restoration Expands Reconstruction Capabilities with New Project Superintendent

*May 27, 2026*

LINDON, UT - May 27, 2026 -
Elite Water Restoration has announced the addition of a dedicated project superintendent to its team, significantly expanding the company's capacity to manage large-scale reconstruction projects following water, fire, and storm damage incidents across Utah.

The strategic hire enables the restoration company to oversee multiple complex rebuild projects simultaneously while maintaining the rapid response times and quality standards that property owners throughout Utah County, Salt Lake County, Summit County, and Wasatch County have come to expect.

"Adding a dedicated superintendent to our reconstruction division represents a critical step in our ability to serve Utah property owners more comprehensively," said Sam Hess, speaking for Elite Water Restoration. "This expansion allows us to manage the entire restoration process from initial emergency response through final reconstruction with greater efficiency and oversight."

The enhanced reconstruction capabilities come at a time when Utah continues to experience significant property damage from various sources including burst pipes, flooding, fires, and severe weather events. According to industry data, approximately 14,000 Americans face water damage emergencies daily, with many requiring extensive reconstruction services beyond initial cleanup and mitigation.

Elite Water Restoration in Lindon UT provides comprehensive restoration services that span the entire recovery process. The company's services include immediate water extraction, structural drying, mold remediation, fire and smoke damage restoration, sewage cleanup, storm damage response, and complete rebuild services. The addition of a project superintendent strengthens the company's ability to coordinate these various services seamlessly.

The new superintendent role focuses on managing the reconstruction phase that follows initial damage mitigation. This includes overseeing drywall installation, flooring replacement, painting, and general contracting work required to restore properties to pre-loss condition. The position also involves coordinating with insurance companies, utilizing industry-standard Xactimate software to ensure accurate documentation and claim justification.

"Property owners dealing with significant damage need a restoration partner who can handle every aspect of recovery," added Hess. "Our expanded reconstruction team ensures that once we complete the emergency response and drying process, we can immediately transition to rebuilding without delays or the need to coordinate multiple contractors."

The company's reconstruction division works in tandem with its emergency response teams, which maintain 24/7 availability and typically arrive at damage sites within 60 to 90 minutes of initial contact. This integrated approach allows for better project continuity and helps minimize the total time properties remain under restoration.

Elite Water Restoration employs advanced equipment and techniques across all service areas, including HEPA filtration systems for mold remediation, hospital-grade antimicrobials for sewage cleanup, and specialized drying equipment for water damage mitigation. The expanded reconstruction capabilities complement these technical resources by ensuring efficient project completion.

The company serves residential and commercial properties throughout Utah, providing restoration services for water damage from burst pipes and flooding, mold growth issues, fire and smoke damage, sewage backups, and storm-related destruction. The organization maintains certifications in multiple restoration disciplines and assists property owners with insurance claim documentation and processing.
