

Anderson Lighting & Electric Expands Full-Service Electrical Offerings Across Flower Mound and Surrounding DFW Communities

July 10, 2026

July 10, 2026 -

Anderson Lighting & Electric, a licensed electrical contractor headquartered in Flower Mound, Texas, has announced an expansion of its full-service electrical offerings for residential, commercial, and industrial customers throughout Flower Mound and the broader Dallas-Fort Worth metroplex. The company, which has been in operation since 2005, cited rising service demand tied to population growth, aging electrical infrastructure, and increased construction and renovation activity across the region as the primary drivers behind the decision.

The announcement comes as North Texas enters the summer season, a period that consistently produces a spike in electrical service requests across the DFW area. Extended periods of high heat place sustained demand on residential and commercial electrical systems, accelerating wear on panels, circuits, and wiring that may already be operating near capacity. Anderson Lighting & Electric indicated that the volume and variety of service calls received in recent months informed the company's decision to expand the breadth of its available services and increase the availability of its certified electricians across its service territory.

Among the services included in the expansion are electrical panel upgrades, repairs, and replacements. Demand for panel-related work has increased across Flower Mound and surrounding communities as older residential properties encounter limitations with electrical infrastructure that was not designed to support current power loads. Systems installed several decades ago frequently prove insufficient for the demands placed by modern HVAC equipment, smart home devices, and high-draw appliances. Anderson Lighting & Electric's electricians conduct panel assessments, identify deficiencies, and carry out replacements in accordance with applicable electrical codes.

Backup generator installation and maintenance services represent another area of expanded availability.

Weather-related power outages have become a recurring concern for homeowners and businesses in North Texas, particularly during the summer storm season. Anderson Lighting & Electric installs and maintains standby generator systems for both residential and commercial clients, providing a source of continuous power during grid outages. The company also expanded its surge protection services, which address the risk of damage to electrical equipment and appliances caused by voltage spikes that frequently accompany lightning activity and grid fluctuations common to the region during summer months.

The company's residential service portfolio encompasses a range of additional electrical work that has seen growing demand in the Flower Mound area. Electrical rewiring services are performed on properties where existing wiring has deteriorated or no longer meets code requirements. GFCI outlet installation is carried out in kitchens, bathrooms, garages, and exterior areas where ground fault protection is required under current electrical standards. USB outlet installation has grown in demand as households seek integrated charging solutions built directly into wall outlets. Ceiling fan installation services see consistent volume during summer months as residents in Flower Mound, Lewisville, Highland Village, and surrounding communities seek to reduce reliance on air conditioning systems. Smoke detector installation services, including hardwired and interconnected configurations, are also part of the company's expanded residential offerings.

LED lighting upgrades have emerged as a notable area of demand within the expansion. The transition from conventional lighting to LED systems has accelerated among homeowners and commercial property operators as utility costs have increased and the available technology has improved. Anderson Lighting & Electric performs LED lighting installations across residential, commercial, and industrial settings, covering interior retrofits, new construction, and exterior applications. The company's landscape lighting services extend this work to outdoor environments, encompassing the design and installation of lighting systems for residential yards, commercial properties, and common areas. Outdoor lighting projects serve functional purposes related to safety and visibility as well as aesthetic and security considerations for property owners.

Anderson Lighting & Electric's commercial and industrial service operations continue to function as a significant component of the company's work across the DFW area. The company performs electrical installations, system diagnostics, code compliance upgrades, and project-scale electrical work for a client base that includes property managers, general contractors, retail operators, and industrial facility managers. Projects handled on the commercial and industrial side range from routine maintenance and repairs to multi-phase electrical installations in warehouses, manufacturing facilities, and office and retail buildings. The company's experience operating across residential, commercial, and industrial contexts allows it to manage varied project types without restricting its availability to smaller residential clients.

Anderson Lighting & Electric holds accreditation from the Better Business Bureau and has received multiple Readers' Choice awards from the Flower Mound community over its more than twenty years of

operation. The company's service area covers Flower Mound, Lewisville, Highland Village, Copper Canyon, Double Oak, Lantana, Bartonville, Argyle, Coppell, Carrollton, Farmers Branch, Grapevine, Colleyville, Southlake, Keller, North Richland Hills, and Trophy Club, among other surrounding communities throughout the northern DFW corridor.

Homeowners, business owners, and property managers in Flower Mound and the surrounding DFW communities can contact Anderson Lighting & Electric by phone at (972) 822-4522 or through the website at <https://www.electrician-flowermound.com/>
