

Auto Glass Stars Reports Surge in Mobile Windshield Repair Requests as Road Travel Increases

May 28, 2026

SAN TAN VALLEY, AZ - May 28, 2026 -
Auto Glass Stars, a San Tan Valley-based auto glass service provider, reports experiencing heightened demand for mobile windshield repair services as increased road travel leads to more incidents of rock chips and windshield damage across Arizona.

The company has observed a notable uptick in service requests for on-site windshield repairs, particularly for minor chips and cracks that require immediate attention before expanding into larger, more costly damage. This trend coincides with increased vehicle miles traveled throughout the state as more residents return to regular commuting patterns and recreational road trips.

"We're seeing significantly more requests for mobile windshield repair services, especially from customers who need immediate attention for rock chips before they spread," said John Schmidt, Operations Manager at Auto Glass Stars. "The convenience of having repairs completed at a customer's home or workplace has become increasingly important as people balance busier schedules with vehicle maintenance needs."

The rise in windshield damage incidents corresponds with Arizona Department of Transportation data showing increased traffic volumes on major highways and arterial roads. Road debris, particularly loose gravel and rocks kicked up by vehicles, remains the primary cause of windshield damage in the region. The company emphasizes that addressing chips promptly can prevent the need for full windshield replacement, as temperature fluctuations common in Arizona can cause small chips to expand rapidly into unrepairable cracks.

Auto Glass Stars windshield crack repair services utilize specialized resin injection techniques that restore structural integrity to damaged glass within approximately 45 minutes. The repair process includes cleaning the damaged area, injecting polymer resin, and curing it to create a permanent bond that prevents further cracking. The company provides lifetime assurance on chip repairs, guaranteeing that properly repaired chips will not expand into larger fractures.

Beyond traditional repair services, the company has adapted its operations to meet changing customer preferences for contactless service options. Mobile technicians can complete most repairs without customers needing to be present, provided vehicle access is arranged. This service model has proven particularly valuable for commercial fleet operators and busy professionals who cannot afford vehicle downtime during business hours.

The company also notes increased interest in preventive services, including ceramic window tinting that helps protect windshields and interior components from extreme heat damage. The ceramic tinting technology rejects solar radiation and blocks harmful UVA and UVB rays, potentially extending the lifespan of windshields and reducing the likelihood of stress cracks caused by temperature extremes.

"Prevention and early intervention remain the most cost-effective approaches to windshield maintenance," Schmidt added. "We encourage drivers to inspect their windshields regularly and address any damage immediately, no matter how minor it may appear."

Auto Glass Stars specializes in comprehensive auto glass services, including windshield replacement, repair, and window tinting for vehicles of all makes and models. The company maintains mobile service capabilities throughout the San Tan Valley area and works directly with insurance providers to facilitate claims processing. All windshield replacements meet or exceed OEM safety requirements, and the company backs its workmanship with comprehensive warranties.
