

VendRespect Introduces Advanced Vendor Management Platform Designed Specifically for MSP Growth

May 28, 2026

Los Angeles, California - May 28, 2026 -
VendRespect, a cybersecurity scoring and vendor management company, today announced the introduction of enhanced vendor management solutions specifically engineered to address the unique challenges faced by Managed Service Providers in managing their supply chain security risks.

The platform represents a strategic response to the growing complexity of vendor relationships in the MSP ecosystem, where service providers must balance multiple client needs while maintaining robust security standards across their entire vendor network. The enhanced capabilities focus on streamlining vendor risk assessments, automating security scoring, and providing real-time visibility into supply chain vulnerabilities.

MSPs face increasing pressure to demonstrate comprehensive security oversight as cyber threats continue to evolve and regulatory requirements become more stringent. The platform addresses these challenges by integrating dynamic cybersecurity scoring, third-party verification processes, and centralized vendor

agreement management into a unified system designed to reduce administrative burden while strengthening security posture.

"The MSP industry has reached a critical juncture where traditional vendor management approaches no longer suffice," said Maksim Avrukin, Chief Executive Officer of VendRespect. "Our platform transforms how MSPs evaluate and monitor their vendor ecosystem by providing real-time security scoring that adapts as vendor risk profiles change, enabling proactive risk management rather than reactive responses to security incidents."

The platform's dynamic scoring system continuously updates based on changes in vendor security profiles, providing MSPs with current risk assessments that reflect the evolving threat landscape. This real-time approach enables service providers to identify potential vulnerabilities before they impact client operations, supporting more effective risk mitigation strategies.

Integration capabilities with existing IT documentation systems, including IT Glue, allow MSPs to leverage their current technology investments while adding sophisticated vendor risk assessment capabilities. The platform aggregates vendor agreements, compliance documentation, and security attestations in a centralized repository, simplifying audit preparation and regulatory compliance demonstrations.

VendRespect vendor management for MSPs includes automated risk assessment workflows that reduce the time required to evaluate new vendors while ensuring consistent security standards across the entire vendor portfolio. The system's third-party verification features provide independent validation of vendor security practices, adding an additional layer of assurance for MSPs and their clients.

The platform also addresses the business development needs of MSPs by providing visual representations of security improvements and risk reduction metrics. These data visualizations support MSPs in demonstrating value to existing clients and accelerating the sales cycle for security-focused services.

Based in Valley Village, California, VendRespect specializes in cybersecurity scoring and vendor risk management solutions tailored for the IT services industry. The company's platform combines automated risk assessment, dynamic security scoring, and comprehensive vendor relationship management tools to help MSPs and IT consultants strengthen their security posture while improving operational efficiency. Through its focus on the specific needs of technology service providers, VendRespect enables organizations to transform vendor management from a compliance burden into a competitive advantage.
