

Credence Chiropractic Provides Prenatal Chiropractic Care in Williamson County, TX,

May 27, 2026

GEORGETOWN, TX - May 27, 2026 - PRESSADVANTAGE -

Credence Chiropractic has outlined the experience and training that shape its prenatal chiropractic services in Williamson County, TX. Founded in Georgetown in 2017 by Dr. Chris Hill and Kate Hill, the practice provides neurologically based chiropractic care for families, with a focus on pregnancy, postpartum recovery, and pediatric wellness.

Dr. Chris Hill graduated from Logan University and completed advanced training in pregnancy and pediatric chiropractic care. As co-founder, he contributes to the practice's family-centered model through clinical education and application in family wellness services. His background supports the integration of proactive approaches within prenatal chiropractic care at the facility.

Kate Hill serves as co-founder and holds certification as a doula. She supports prenatal and postpartum aspects of patient care. Her professional transition to practice leadership complements the prenatal services offered by Credence Chiropractic.

The combined expertise of Dr. Chris Hill and Kate Hill has shaped prenatal chiropractic services at Credence Chiropractic, Prenatal Chiropractic Care in Williamson County, TX. The practice incorporates the Webster Technique, applied by Webster-certified chiropractors to focus on pelvic balance and alignment during pregnancy. A 2002 study published in the Journal of Manipulative and Physiological Therapeutics surveyed doctors using the Webster Technique and reported an 82 percent success rate in resolving breech presentations among participating cases. This data supports the technique's established role in promoting optimal fetal positioning and maternal comfort during pregnancy.

Additional research reinforces the value of chiropractic approaches in prenatal contexts. A 2007 narrative review in the Journal of Manipulative and Physiological Therapeutics indicated that chiropractic care during pregnancy provided relief from back pain in 84 percent of documented cases. A 2014 study in Chiropractic and Manual Therapies further reported that a substantial proportion of pregnant patients experienced clinically relevant improvements in low back and pelvic pain following chiropractic treatment, with positive outcomes observed at multiple follow-up intervals up to one year.

The Torque Release Technique forms another component of the practice's methods. This gentle approach targets nervous system stress with precision. Clinical observations associated with the Torque Release Technique have noted benefits in neurological function and patient well-being measures across various groups. These techniques align with the neurologically based framework at Credence Chiropractic, emphasizing brain-body communication.

Dr. Chris Hill has addressed the value of proactive family health management. Dr. Chris Hill, co-founder and chiropractor at Credence Chiropractic, stated, The sooner we can be proactive with our kids health, the healthier they can grow up to be. His statement reflects perspectives documented in the practice's team materials.

Kate Hill has contributed to the practice's emphasis on maternal support. Kate Hill, co-founder and certified doula at Credence Chiropractic, noted, Through regular chiropractic care, the body can address and resolve issues such as headaches, migraines, allergies, sinus infections, and ear infections. Her comment appears in the team profile on the practice website.

New patients at Credence Chiropractic complete consultations, nervous system evaluations, and personalized assessments before beginning treatment. The practice structures prenatal chiropractic services to support comfort during pregnancy, pelvic alignment, preparation for delivery, and postpartum recovery. The Webster Technique receives emphasis for its documented application in optimizing pelvic function. The Torque Release Technique complements this by addressing nervous system regulation.

Since opening in Georgetown in 2017, Credence Chiropractic has continued serving families throughout Williamson County with neurologically based chiropractic care. Dr. Chris Hill's advanced pregnancy and pediatric training, combined with Kate Hill's doula certification, continues to shape the clinic's approach to prenatal and family wellness. The practice integrates neurological assessments and individualized care planning into its protocols.

Patient intake follows a defined sequence that includes health history review and nervous system evaluations. This process supports the creation of tailored plans for prenatal chiropractic services. The non-invasive methods used align with ongoing obstetric care and focus on physiological support during pregnancy stages.

Further clinical context comes from studies on prenatal interventions. Research has associated chiropractic care during pregnancy with reduced labor durations in certain populations. For instance, analyses have reported shorter labor times among mothers receiving such care compared to control groups in select datasets. These references provide positive verification for supportive prenatal strategies.

Dr. Chris Hill's Logan University education and advanced credentials established a clinical foundation for prenatal and pediatric components. Kate Hill's contributions through doula expertise and co-leadership have supported the maternal focus within the practice. Their professional profiles have sustained operations since the 2017 establishment.

Operational details describe how patient visits progress from initial consultations through assessments and adjustments. Advanced evaluation tools assist in gathering data on nervous system performance. The Webster Technique applies specifically for pelvic optimization, consistent with its use in prenatal contexts. The Torque Release Technique addresses tonal aspects of nervous system function.

Credence Chiropractic maintains its prenatal chiropractic services through the leadership of Dr. Chris Hill and Kate Hill. Their documented training and experience remain integral to service delivery in the Williamson County area. The practice model prioritizes individualized, neurologically oriented support for families.

Credence Chiropractic is a family chiropractic practice located in Georgetown, Texas. The practice provides prenatal chiropractic care, pediatric chiropractic care, whole family chiropractic care, and neurological chiropractic services using methods including the Torque Release Technique and Webster Technique.
