ABT Foundation Solutions Marks 10 Years of Concrete Leveling Services for Northeast Wisconsin Properties

May 28, 2026

NEENAH, WI - May 28, 2026 -
ABT Foundation Solutions, a provider of foundation and concrete services in Northeast Wisconsin since 2002, is marking 10 years of its dedicated concrete leveling division. The milestone highlights the company's ongoing work using polyjacking techniques to restore settled concrete surfaces on residential and commercial properties throughout the region. This approach addresses common issues such as uneven driveways, patios, sidewalks, and garage floors caused by soil erosion and seasonal ground movement.

Concrete leveling restores functionality and safety to surfaces that have shifted over time. Voids form beneath slabs as underlying soils erode or compact, leading to cracks, tripping hazards, and poor drainage. In Northeast Wisconsin, freeze-thaw cycles and variable soil conditions accelerate these problems. ABT Foundation Solutions employs polyjacking, a method that involves drilling small holes in the affected slab and injecting expanding polyurethane foam. The foam fills voids and lifts the concrete back to its original position with precision, followed by patching to create a seamless finish.

The process begins with a free inspection as standard practice, during which technicians evaluate the extent of settlement, identify causes, and recommend appropriate solutions. Crews then prepare the site by cleaning

the surface and determining optimal injection points based on measurements and load requirements. The polyurethane material expands rapidly upon injection, providing immediate support without the need for full slab removal or replacement. This technique typically requires less time and produces minimal disruption compared to traditional methods.

ABT Foundation Solutions has refined its concrete leveling operations over the decade, completing numerous projects that integrate with its broader foundation services. The company completes 800 to 1,200 jobs annually across all service lines, with trained crews holding certifications in relevant techniques. Weekly training sessions keep staff current on material advancements and installation standards suited to local conditions. Projects generally commence within three weeks of inspection approval, with full site restoration included.

Mickey Stachurski, Co-Owner of ABT Foundation Solutions, reflected on the division's development. "Over the past 10 years, our concrete leveling services have helped property owners address settlement issues efficiently while preserving existing slabs," Stachurski said. Studies on polyurethane injection methods indicate potential energy efficiency gains through improved surface drainage and reduced water pooling near foundations, which can limit further soil erosion.

The polyjacking process uses high-quality, durable foams engineered for long-term performance in varying climates. Technicians monitor lift in real time to achieve level results within tight tolerances. This method avoids heavy equipment associated with full replacements, reducing environmental impact through material efficiency and shorter project durations. Documentation provided to property owners includes details on the work performed and recommendations for ongoing maintenance.

ABT Foundation Solutions differentiates itself through measurable outcomes, such as consistent project completion rates and an A-plus rating with the Better Business Bureau since its accreditation. The integrated service model allows coordination of concrete leveling with related needs, including foundation stabilization or drainage improvements when settlement links to broader issues. Estimators deliver clear assessments during consultations, outlining expected results based on site-specific data.

Stachurski added perspective on operational standards. "Our focus remains on delivering reliable results through experienced teams and proven materials tailored to Northeast Wisconsin properties," he said. All staff, including estimators and installers, participate in ongoing training to support consistent execution.

Concrete leveling contributes to property safety by eliminating uneven surfaces that pose risks, particularly in high-traffic areas like driveways and walkways. It also supports proper water management by restoring slopes that direct runoff away from structures. The company handles both small residential repairs and larger commercial applications, adapting techniques to various slab types and thicknesses.

Free inspections serve as the standard entry point for all services, allowing property owners to obtain evaluations without initial cost. This practice enables early identification of issues before they escalate. The company's full-service approach encompasses foundation repair, basement waterproofing, crawl space services, egress windows, and gutter installations, providing comprehensive property maintenance options.

Founded in 2002, ABT Foundation Solutions, Inc. specializes in foundation repair, basement waterproofing, crawl space repair, concrete leveling, egress window installation, and gutter services for residential and commercial properties in Northeast Wisconsin. The company employs a team of trained professionals who deliver customized, permanent solutions with a focus on quality and durability.
