

## **Roofing Doctors Announces New Service Location for Roofing Installation in Rehoboth**

*June 04, 2026*

REHOBOTH, MA - June 04, 2026 - PRESSADVANTAGE -

Roofing Doctors has announced the opening of a new service location at 478 Tremont St, Rehoboth, MA 02769, expanding the company's roofing installation and exterior maintenance operations in Bristol County and surrounding communities. The new location supports residential and commercial property owners seeking roofing, gutter, skylight, and chimney-related services in the region.

The company stated that the expansion reflects continued operational growth and increased demand for roofing installation and repair services across southeastern Massachusetts. Roofing Doctors provides installation and replacement services for multiple roofing systems, including three-tab shingles, architectural shingles, and wood shingles, along with related exterior components designed to support roof performance and water management.

"Opening the Rehoboth location allows the company to coordinate roofing and exterior projects more efficiently throughout the surrounding area," said a Roofing Doctors representative. "The additional location supports scheduling, material access, and ongoing project management for residential and commercial roofing work."

Roofing systems remain one of the primary structural components of residential and commercial properties. Improper installation or deterioration can contribute to water intrusion, insulation issues, and damage to framing components over time. Roofing Doctors performs roof replacement, roof repair, and roof installation services for various property types using materials selected according to project requirements and building conditions.

The company also installs skylight systems as part of roofing projects. Skylights are commonly incorporated into roofing structures to introduce natural light into interior spaces while maintaining roof integration standards. Roofing Doctors coordinates skylight replacement projects alongside roofing replacement work to align installation schedules and material compatibility. The company stated that combining roofing and skylight replacement during the same project may assist with warranty synchronization and reduce future disruption to roofing systems.

In addition to roofing installation, Roofing Doctors provides gutter installation and gutter system design services. Gutters are used to direct rainwater away from roofing systems, siding, and foundations in order to reduce the potential for water accumulation around structures. The company installs gutter systems configured to support roof drainage requirements and property layouts. Roofing Doctors stated that gutter projects are evaluated according to roof dimensions, runoff flow, and existing drainage conditions.

Roofing Doctors also performs chimney-related roofing work, including flashing repair, chimney cap installation, and repointing services. Chimneys may contribute to roof leakage when flashing systems deteriorate or masonry components become compromised. The company's technicians inspect chimney conditions during roofing assessments and identify areas where water penetration or structural deterioration may affect the roofing system. Repair recommendations are based on visible wear, flashing conditions, and masonry stability.

The new Rehoboth location supports the company's ability to coordinate roofing projects throughout nearby communities while maintaining access to installation materials and scheduling resources. Roofing Doctors stated that the location will serve as a regional operations point for roofing inspections, repair coordination, and exterior system installation projects.

Roofing Doctors provides roofing and exterior services for residential and commercial properties throughout Massachusetts. The company's service offerings include roof replacement, roof repair, gutter installation, skylight installation, chimney flashing repair, and related exterior maintenance work. Roofing Doctors installs multiple roofing material types and performs project evaluations based on roof age, structural condition, and visible weather-related wear.

The company stated that roofing assessments may include inspections of shingles, flashing systems, drainage components, and roof penetrations in order to identify visible damage or installation concerns. Roofing Doctors also coordinates replacement projects involving integrated exterior systems, including gutters and skylights, when required during roofing renovations.

Additional information about the Rehoboth location and company services is available through Roofing Doctors. Information regarding the new service area can also be found at [learn more](#).
