

Go Industries Expands Winch Grille Guard Systems with Enhanced Modular Design Options

June 02, 2026

Richardson, TX - June 02, 2026 -
Go Industries Inc., a Richardson, Texas-based manufacturer of heavy-duty truck accessories, announces the expansion of its commercial-grade winch grille guard systems featuring innovative modular designs that allow for greater customization and protection options for commercial and recreational truck owners.

The expanded product line addresses growing demand from fleet operators and individual truck owners seeking integrated winch solutions that combine robust front-end protection with practical utility features. The modular design enables users to configure their grille guards with optional winch carriers and brush guards based on specific vehicle requirements and operational needs.

The Go Industries winch grill guard system features construction from 5/16-inch laser-cut steel uprights paired with 2.5-inch, 16-gauge steel cross tubes, providing substantial protection for vehicle front ends. The modular approach allows customers to select from 9.5 or 16.5 winch carrier options, while optional brush guards offer additional protection for headlight areas against road debris and off-road hazards.

"Our commercial-grade winch systems represent a significant advancement in modular truck protection technology," said a Go Industries spokesperson. "The ability to customize these guards with integrated winch carriers and brush guards gives our customers the flexibility to build exactly what their vehicles require, whether for commercial operations, law enforcement applications, or recreational off-road use."

The expansion comes as demand for heavy-duty truck accessories continues to grow across multiple sectors, including construction, agriculture, emergency services, and recreational off-roading. Each system includes custom heavy-duty mounting brackets engineered for maximum strength and simplified installation, addressing common concerns about fitment and durability in commercial applications.

All winch grille guard systems are manufactured in the United States at the company's Texas facility and carry a three-year warranty covering materials, workmanship, and finish. The products are available for a wide range of truck makes and models, with pricing varying based on vehicle specifications and selected options.

The modular design philosophy extends throughout Go Industries' product portfolio, which includes headache racks, bumper replacements, air flow tailgates, and specialized equipment for law enforcement vehicles. This approach allows the company to serve diverse market segments while maintaining consistent quality standards across all product lines.

Go Industries Inc. has been manufacturing truck accessories and custom equipment since 1978. The company specializes in front and back-end protection systems, law enforcement vehicle equipment, and custom manufacturing services. Based in Richardson, Texas, Go Industries maintains Platinum Status with SEMA and manufactures all products in the United States. The company's product line includes grille guards, winch application systems, bumper replacements, headache racks, mud flaps, and specialized accessories for commercial, law enforcement, and recreational vehicle applications.
