

Go Industries Inc Expands Dually Mud Flaps Line for Dodge Ram and Other Heavy-Duty Trucks

June 04, 2026

Richardson, TX - June 04, 2026 -
Go Industries Inc, a Richardson, Texas-based manufacturer of truck accessories and law enforcement equipment, has expanded its product line to meet growing demand for heavy-duty mud flap solutions designed specifically for dually trucks across major American manufacturers.

The expanded product offerings include multiple mud flap configurations for dual-wheeled pickup trucks from Chevrolet, GMC, Ford, and Dodge Ram, addressing the unique protection needs of commercial and heavy-duty vehicle operators. The company's mud flap sets range from classic rubber designs to stainless steel and diamond tread options, providing comprehensive coverage for vehicles that require enhanced debris protection due to their dual rear wheel configuration.

Dually trucks, which feature dual rear wheels on each side for increased load capacity and stability, present specific challenges for debris management that standard single-wheel mud flaps cannot adequately address. The expanded product line includes complete sets with mounting brackets as well as replacement flaps for

existing systems, ensuring compatibility across all major dually truck models currently in service.

"The demand for specialized dually mud flaps ram configurations has increased significantly as more contractors and fleet operators recognize the importance of protecting both their vehicles and other motorists from road debris," said a Go Industries Inc spokesperson. "Our expanded line addresses the specific requirements of these heavy-duty vehicles while maintaining the durability standards our customers have come to expect since 1978."

The mud flaps are manufactured from non-recycled rubber materials designed to withstand the demanding conditions faced by commercial and heavy-duty vehicles. Each product undergoes testing to ensure proper fit and function across different truck models and years, with mounting systems engineered to accommodate the varying specifications of different manufacturers.

Go Industries Inc has observed increased interest in protective accessories as fleet operators and individual truck owners seek to minimize vehicle damage and maintenance costs. Road debris, including rocks, sand, salt, and other materials, can cause significant damage to vehicle paint and undercarriage components, particularly in commercial applications where trucks operate in construction zones and unpaved areas.

The company's approach to mud flap design considers both the protection needs of the vehicle itself and the safety requirements for other vehicles sharing the road. Properly installed mud flaps help prevent debris from being thrown into traffic, reducing the risk of windshield damage and other hazards for following vehicles.

Go Industries Inc maintains its position as a specialized manufacturer serving the truck accessory market alongside its law enforcement and custom manufacturing divisions. The company holds Platinum Status with SEMA, reflecting its commitment to quality standards and innovation in the automotive aftermarket industry.

Since its founding in 1978, Go Industries Inc has developed a comprehensive range of truck protection products including grille guards, bumper replacements, headache racks, and specialized accessories for law enforcement vehicles. The company operates from its Richardson, Texas facility, providing products to customers throughout North America through direct sales and authorized distributors.
