

MasterBilt Homes, Inc. Introduces Updated Residential Planning Coordination Process

June 01, 2026

COLORADO SPRINGS, CO - June 01, 2026 -

MasterBilt Homes, Inc., a locally and veteran-owned custom home builder serving El Paso County since 1991, announced the introduction of an updated residential planning coordination process intended to support communication and scheduling during custom home development projects. The company stated that the updated process is being incorporated into ongoing and future residential construction activities across the communities it serves.

According to the company, the planning coordination adjustments are designed to improve organization between design discussions, construction scheduling, permitting timelines, and site preparation phases associated with custom residential construction. MasterBilt Homes, Inc. indicated that the updated approach reflects changes made after reviewing operational workflows for residential building projects completed over recent years.

The company stated that coordination across multiple stages of home construction has become increasingly important as property owners continue to request individualized floor plans, build-on-site options, and location-specific design considerations. MasterBilt Homes, Inc. noted that planning activities often involve

communication between property owners, subcontractors, permitting offices, suppliers, and construction supervisors over an extended project timeline.

Jim Stiltner of MasterBilt Homes, Inc. said the company reviewed several areas of project coordination while evaluating how residential construction schedules are managed throughout different phases of development.

"Custom home construction involves many moving parts that require ongoing communication from the earliest planning stages through project completion," said Jim Stiltner. "The updated coordination process was developed to help organize scheduling discussions, documentation tracking, and construction timelines in a more structured way throughout residential building projects."

MasterBilt Homes, Inc. stated that the planning process includes review procedures connected to lot evaluations, residential layouts, permitting requirements, material scheduling, and construction sequencing. The company noted that timelines associated with residential construction projects can vary depending on property conditions, weather, design modifications, and municipal review periods.

Company representatives stated that the revised coordination process is intended to provide additional consistency while projects move between design planning and active construction stages. The company also noted that construction projects involving custom residential layouts often require adjustments during development due to site conditions or homeowner requests.

MasterBilt Homes, Inc. has provided residential construction services throughout El Paso County for more than three decades. The company builds custom homes on both privately owned sites and builder-controlled properties. According to the company, projects completed over the years include homes constructed in Colorado Springs, Monument, Palmer Lake, Black Forest, and Peyton.

The company stated that residential construction planning has continued evolving as property owners request more individualized home configurations and flexible layout options. MasterBilt Homes, Inc. indicated that construction preparation often begins months before active building activity starts, particularly for projects involving land development considerations, utility coordination, or customized floor plans.

Jim Stiltner stated that project coordination remains an ongoing area of focus for the company as construction activity continues across multiple residential communities.

"Every residential construction project involves its own timeline, property conditions, and planning considerations," Jim Stiltner said. "The company continues reviewing internal processes to support communication and organization throughout the construction schedule."

MasterBilt Homes, Inc. stated that the updated planning coordination process is now part of its operational procedures for custom residential construction projects moving forward. The company noted that construction schedules remain dependent on permitting timelines, site preparation requirements, weather conditions, and material availability for each project.

MasterBilt Homes, Inc. is a locally and veteran-owned custom home builder based in Colorado Springs, Colorado. Established in 1991, the company provides residential construction services throughout El Paso County and surrounding communities.
