We've been there — watching API bills eat into margins. We negotiate enterprise-volume rates and pass the savings to you.

```
Python openai
```

```
# Just change your base URL. That's it.  
import openai  
  
client = openai.OpenAI(  
    api_key="your-NeatAPI-key",  
    base_url="https://api.neatapi.ai/v1"  
)  
  
response = client.chat.completions.create(  
    model="gpt-4o",  
    messages=[{"role": "user", "content": "Hello!"}]  
)
```

100+ Models available 1 Unified API key 5% Off every call

NeatAPI.ai Launches Affordable OpenAI and Claude API Token Marketplace for Tech Startups

June 05, 2026

SAN FRANCISCO, CA - June 05, 2026 - PRESSADVANTAGE -

NeatAPI.ai announced the launch of its NeatAPI.ai affordable API token marketplace, a platform designed to help tech startups access OpenAI and Claude API tokens in a more cost-effective way. The company said the marketplace was created to address a growing challenge faced by startup teams that depend on large language models to build products, automate workflows, improve customer support, and develop AI-powered features while still maintaining control over operating costs.

As AI adoption accelerates across the technology sector, startups are increasingly expected to move fast, experiment often, and launch products powered by advanced language models. At the same time, many early-stage companies are under pressure to stay lean, manage burn carefully, and make every infrastructure decision count. For teams working with limited budgets, API spending can quickly become one of the most significant barriers to sustained product development. NeatAPI.ai said its marketplace was developed to help solve that problem by offering a more affordable path to the tokens that many startups now rely on every day.

According to the company, the platform is intended for founders, developers, product teams, and AI-first startups that need dependable access to OpenAI and Claude APIs without the same level of financial strain that can come with traditional usage models. By giving businesses a more flexible way to source API tokens, NeatAPI.ai aims to help smaller teams continue testing, iterating, and deploying AI experiences without slowing momentum at key stages of growth.

A company spokesperson for NeatAPI.ai said the platform reflects a broader need in the startup ecosystem for practical, budget-conscious infrastructure solutions. "We built NeatAPI.ai to give startup teams a more accessible and affordable way to use leading AI models in real business environments," the spokesperson said. "Many smaller companies want to innovate with OpenAI and Claude, but the cost of ongoing API usage can become a serious limitation. Our goal is to reduce that friction and make it easier for teams to keep building."

NeatAPI.ai said the marketplace can support a broad range of use cases across modern software and digital product teams. These include AI assistants, internal productivity tools, coding and developer applications, customer service automation, content generation systems, workflow automation, and other products that require access to advanced natural language capabilities. The company believes that lowering token costs can help startup teams allocate resources more efficiently across engineering, product development, go-to-market execution, and long-term growth planning.

The company also noted that affordability in AI infrastructure is becoming increasingly important as the startup market grows more competitive. In many cases, smaller teams are expected to deliver sophisticated user experiences powered by AI while operating with fewer people and tighter budgets than larger competitors. NeatAPI.ai said it sees affordable access to API tokens as one way to help level that playing field and enable more companies to participate meaningfully in the next phase of AI product innovation.

By focusing on affordability and flexibility, NeatAPI.ai said it hopes to serve as a practical resource for startups looking to scale responsibly. The company added that reducing cost pressure around API usage can support faster experimentation, clearer budgeting, and more confident product planning for teams integrating AI into their core offerings.
