

Voytec Decorator Ltd Announces Enhanced Microcement Installation Services Across West Yorkshire

June 08, 2026

Bradford, England - June 08, 2026 -
Shipley, Bradford, West Yorkshire ? Voytec Decorator Ltd has announced the introduction of newly enhanced microcement installation services, marking a significant development in the company?s specialist decorative finishes offering. Operating from its base in Shipley, Voytec Decorator Ltd has refined its microcement systems in response to growing regional demand for modern, durable, and seamless interior surfaces across residential and commercial settings.

The updated service reflects a recent investment in application techniques, material selection, and quality control processes. These changes have been implemented to address the practical challenges associated with microcement installations, particularly in high-use environments such as kitchens, bathrooms, and open-plan living spaces. The announcement confirms that the enhanced services are now available throughout Shipley, Bradford, Leeds, Harrogate, Halifax, Ilkley, Bingley, Keighley, Skipton, Wakefield, Pontefract, Huddersfield, York, Doncaster, Otley, Haworth, Burley-in-Wharfedale, Menston, Guiseley, Yeadon, Greengates, Apperley Bridge, Horsforth, and surrounding locations.

Microcement is a thin, cement-based decorative coating applied by hand in multiple layers to produce smooth, joint-free finishes. It is widely used for floors, walls, bathrooms, kitchens, and feature areas, and can be installed over a variety of existing surfaces, including tiles, concrete, and plasterboard. Voytec Decorator Ltd has enhanced its service by refining surface preparation stages, improving sealing systems, and expanding finish options to support consistent performance across different property types and interior conditions.

The improvements have been informed by long-term project experience and changing expectations within the interior finishes market. Clients increasingly seek materials that combine contemporary design with practical considerations such as ease of maintenance and resistance to wear. The updated microcement service has been structured to meet these requirements while maintaining a controlled and methodical installation process aligned with professional decorative standards.

Voytec Decorator Ltd was established in 2008 and is led by owner Wojciech Wasilewski, who has completed professional training in decorative techniques in Poland, Italy, Spain, and the United Kingdom. The company specialises in microcement and Venetian plaster applications, alongside professional painting and wallpaper installation, and delivers projects across West Yorkshire and nearby areas. This specialist focus has shaped the development of the enhanced service, ensuring that improvements are grounded in practical application rather than theoretical changes.

According to Wasilewski, the enhanced service reflects a continued emphasis on technical accuracy and material understanding. ?Microcement requires a disciplined approach at every stage of application,? said Wasilewski. ?The recent improvements are the result of years of site-based experience and ongoing refinement. These changes allow installations to be carried out with greater control, particularly where surfaces are exposed to moisture, temperature changes, or frequent daily use.?

A central component of the updated service is a more detailed pre-installation assessment process. Each project now includes a structured evaluation of substrate condition, moisture content, and potential movement within the surface. These assessments guide the selection of primers, reinforcement layers, and sealers used during installation. This approach supports improved adhesion and durability, particularly in bathrooms, wet rooms, and kitchen environments.

The company has also expanded its range of available microcement finishes to reflect broader interior design preferences. Matte and satin textures are commonly selected for residential interiors, while finishes designed for higher durability are often specified for commercial or shared-use spaces. These options allow microcement installations to be adapted to both visual and functional requirements without compromising

consistency.\

Voytec Decorator Ltd reports continued growth in demand for microcement as part of wider refurbishment and renovation projects. Urban centres such as Leeds, Bradford, York, and Harrogate remain key areas of activity, alongside towns and villages including Haworth, Menston, Burley-in-Wharfedale, and Apperley Bridge. The enhanced service framework has been developed to support both single-room installations and larger, multi-area projects.

In addition to technical refinements, the company has strengthened its approach to project coordination in response to the increasing complexity of interior renovation projects. Microcement installations are often specified alongside other decorative finishes, which requires careful sequencing, timing, and communication to avoid disruption and inconsistencies. The updated service structure allows microcement work to be planned in conjunction with painting, wallpaper installation, and Venetian plaster applications, reducing delays between trades and supporting a more unified delivery process. This coordinated approach enables clients to complete multiple decorative elements within a single project framework, supporting consistent finishes, clearer scheduling, and cohesive interior outcomes across full properties.

Industry observers note that microcement continues to gain wider recognition as an alternative to tiles and other conventional finishes due to its seamless appearance and adaptability across different interior settings. Its compatibility with underfloor heating systems and its suitability for continuous surfaces make it particularly relevant for open-plan layouts and modern renovation projects. These characteristics have contributed to its increasing use in contemporary interiors, where design continuity, reduced visual interruption, and practical performance are key considerations in material selection.

The announcement of enhanced microcement installation services represents the latest stage in Voytec Decorator Ltd?s ongoing development. With a continued focus on specialist decorative finishes, technical control, and regional delivery, the company remains committed to providing structured microcement installations across West Yorkshire and neighbouring locations.
