

# **Build Conex Strengthens Construction Dispute Resolution Services for Australian Infrastructure Projects**

*June 11, 2026*

BRISBANE, QLD - June 11, 2026 - PRESSADVANTAGE -

Build Conex, a Brisbane-based construction dispute resolution specialist, has enhanced its expert reporting and claim preparation services to address the growing complexity of disputes in Australia's construction, infrastructure, mining and energy sectors.

The company provides comprehensive analysis and expert reporting on merit, quantum and delay for construction disputes across domestic and international projects. With infrastructure development continuing to expand across Australia, the demand for specialised dispute resolution expertise has increased significantly.

Build Conex Brisbane delivers quantum and delay expertise through rigorous contractual analysis and evidence-based assessments. The firm's approach focuses on early, proportionate evaluation of entitlements and values to help parties understand their positions before disputes escalate. This methodology assists construction companies, contractors and project owners in clarifying issues genuinely in dispute, ensuring all parties have clear understanding of entitlement, valuation and risk.

The company's expert reports are structured to address causation, concurrency and criticality rather than retrospective narratives. Quantum assessments are conducted by reference to contract mechanisms and project records, providing objective analysis based on contemporaneous documentation. This approach helps withstand predictable lines of attack in adjudication, arbitration and court proceedings.

Build Conex serves multiple industries including renewables, oil and gas, infrastructure, roads, rail, tunnels, commercial building, water treatment facilities, process plants, power generation and health facilities. The firm's expertise spans complex disputes involving change process misuse, delivery-model misalignment, as-built misalignment and forensic labour hours reconciliation.

The company's services address common challenges in construction disputes, including alleged failures to notify, reliance on time bars, fragmented delay analysis and quantum claims unsupported by contemporaneous records. Through detailed case studies, Build Conex demonstrates resolution of disputes ranging from defence wharf redevelopment to aquatic centre adjudication defence.

Consultation services offered by the firm help clients assess entitlement, evidentiary strength and recovery strategy. The company works closely with construction industry participants to understand unique project requirements and provide tailored analysis and advice for each dispute scenario.

Build Conex maintains several industry memberships and certifications, demonstrating commitment to professional standards and best practices in construction dispute resolution. The firm's non-partisan reports focus on actual operation of contract clauses in context, distinguishing between strict contractual compliance, waiver, knowledge and prejudice.

As construction projects become increasingly complex and contractual arrangements more sophisticated, the role of expert dispute resolution continues to evolve. Build Conex's analytical approach provides clarity in disputes involving multiple stakeholders, concurrent delays and complex quantum calculations.

Build Conex specialises in construction dispute resolution, offering claim preparation and expert reporting services throughout Australia. The company provides quantum and delay expertise for construction, infrastructure, mining and energy sectors, delivering evidence-based analysis for adjudication, arbitration and litigation proceedings.
