

Encore Data Products Expands Focus on Hospital Headphones and Healthcare Audio Hygiene Solutions

August 31, 2026

LAFAYETTE, CO - August 31, 2026 -

Encore Data Products, a Colorado-based supplier of audiovisual equipment and technology accessories, is expanding its focus on healthcare audio and hygiene solutions, offering hospitals, clinics, rehabilitation centers and other medical organizations bulk headphones, disposable earbuds, sanitary headphone covers and related products for patient and staff use.

The company's growing healthcare focus builds on its experience supplying high-volume audio solutions to schools and other institutional customers. As healthcare organizations use audio technology for patient entertainment, educational content, rehabilitation activities, staff training and other applications, Encore Data Products is highlighting products that address practical purchasing considerations including cost, distribution, durability and hygiene.

"Healthcare organizations face many of the same large-scale audio purchasing challenges we have helped educational institutions address for years," an Encore Data Products spokesperson said. "Facilities may

need to provide audio to many different users while also considering budgets, device compatibility, cleanliness and how equipment will be distributed. Our goal is to give healthcare buyers a range of options so they can choose the solution that makes sense for each environment.?

Encore Data Products' healthcare audio selection includes disposable and low-cost products for applications where organizations need to distribute audio equipment efficiently. Individually packaged earbuds, for example, can be assigned to individual patients or users rather than repeatedly redistributed. For facilities that prefer reusable headphones, sanitary covers and appropriate cleaning procedures can become part of an organization's equipment-management strategy.

Among the economical audio products available from Encore Data Products is the Soundnetic SN-09 Headphones, a low-cost stereo headphone for patient education, entertainment and staff training. Encore also carries the Soundnetic SN-313, an affordable disposable-style headphone with cushioned leatherette earpads and a 3.5mm connection.

For organizations that prefer compact earbuds for individual distribution, Encore Data Products offers several options. The AVID Products AE-205 is an economical 3.5mm earbud, while the AVID JS-75 features soft foam earpads, a five-foot cord and individual packaging to simplify distribution. Encore's current product selection also includes additional bulk earbud options for organizations looking for cost-effective audio equipment for temporary or individual use. Encore Data Products is also highlighting hygiene accessories for organizations that reuse headphones. The company's disposable sanitary headphone covers are designed for shared environments including hospitals and medical offices. These covers give facilities another option for managing headphones that will be used by multiple people.

'Healthcare buyers don't need the same audio product for every department or application,' an Encore Data Products spokesperson said. 'A disposable earbud may make sense when audio is being issued to an individual patient, while a more durable headphone may be appropriate for repeated staff training or another controlled-use environment. We want organizations to be able to match the product to how it will actually be used.'

Encore Data Products' dedicated healthcare audio and hygiene offerings serve multiple care settings. Potential applications include patient-room entertainment, therapy and rehabilitation sessions, staff training rooms and other situations where patients or employees need access to private or individualized audio.

The expansion into healthcare builds on Encore Data Products' established institutional purchasing model. The company offers volume pricing and supports purchase orders and P-cards, so organizations buying larger quantities of headphones, earbuds and related technology can manage their procurement needs.

Encore's broader product catalog also gives healthcare organizations access to equipment beyond personal audio. The company carries document and web cameras, microphones and speakers, charging and synchronization products, translation and reading tools, podcasting and streaming equipment, cables and adapters, electronic sanitizers, headphone and microphone covers and other audiovisual accessories.

While Encore Data Products has been associated with classroom headphones and educational technology for years, its product catalog serves a wider range of institutional environments. The company's headphone selection is used in schools, businesses, libraries, healthcare facilities, fitness centers, museums, tour programs and call centers. The Soundnetic Earbuds offer another economical option for organizations that need comfortable disposable audio for temporary listening applications.

The increased healthcare focus means medical organizations can now find audio products suited to high-volume institutional purchasing. Instead of treating patient headphones, disposable earbuds and hygiene accessories as separate purchases, healthcare facilities can evaluate them as part of a broader audio strategy based on who will use the equipment, how often it will be used, whether it will be shared and what connection type is required.

Healthcare facilities can browse Encore Data Products' healthcare audio and hygiene solutions or contact the company for help with bulk purchasing and product selection.

Encore Data Products is a privately held company based in Lafayette, Colorado. The company supplies audiovisual equipment, headphones, headsets, earbuds, AV technology, accessories and clean and healthy supplies to education, healthcare, business and other institutional markets.
