

Dr. Kevin Fleming Offers Alternative Neuroscience Solutions For Mental Illnesses

April 28, 2016

April 28, 2016 - PRESSADVANTAGE -

Grey Matters International Inc., a global neuroscience-based concierge services firm for distinctive clientele dealing with various mood, relationship and behavioral "problems," is offering a solution for those seeking more than just therapy for mental health concerns. Dr. Kevin Fleming provides executive wellness solutions for high performance populations challenged by lifestyle and poor fits with the non-innovative world (traditionally) of psychotherapy. He explains, "There is a desire among people seeking help for mental health challenges and relationship difficulties, wanting a solution rather than endless talk therapy sessions every week. Traditional therapy for many doesn't work and personalized, customized care is usually needed---especially for those who need something "different" than the old school approach and don't want to sacrifice best practice. They are seeking the newest, most effective techniques and innovative solutions for treating mental health factors."

Dr. Fleming integrates advanced neurotechnology rather than medication as a more viable method. He says, "As well, there is a growing crisis in America regarding an over-reliance on pharmaceutical pills and other substances as a method of treatment." Fleming says that all of these things point to Grey Matters' innovation of private neurotechnology based care, which is specifically designed for people not wanting to be one of the

statistics. He says that those who think outside the box are often the first to find real results, and that this type of unique thinking is what has sparked the development of his business model of exceptional care and service, in a "we come to you" concierge fashion.

Dr. Fleming offers executive coaching that he emphasizes will help on more levels than just traditional coaching methods, by utilizing behavior change consultations that are focused on "decisional neuroscience" research and enhancing technologies. He states that these strategies are designed to offer more to those looking to improve strategy and results---especially when irrationality prevails---than what they typically get from motivational speakers and self help gurus.

Fleming states that his approach works with network dysregularities in the brain in order to promote a more natural autonomic balancing. He says that there is a forgotten importance to neural oscillatory patterns and how critically they play a role in mood and self-regulation.

Grey Matters International Inc. also provides personal spiritual development that concentrates on hidden self-deceit factors that plague many of the "spiritually narcissistic" efforts that people compulsively try to do to get their "selves" to higher levels. This paradoxical state of affairs around seeking a higher consciousness calls for neuroeconomics and the study of irrationalities to get faster results, outcomes that are much more effective than other methods traditionally used for transformation.

Dr. Fleming urges those interested to contact Grey Matters International to learn more. He states that there is still much to be learned about neuroscience influences and the effects that certain factors play on overall mental health.

Those interested in learning more about Grey Matters International and the services they provide can do so on the company's official website.
