

HRT Mobile Welding Expands Metal Fabrication Capabilities for East Bay Commercial Clients

June 19, 2026

LIVERMORE, CA - June 19, 2026 -
HRT Mobile Welding, a Livermore-based welding and fabrication company, has expanded its service offerings to provide comprehensive custom metal and structural steel fabrication solutions for commercial and industrial clients throughout the San Francisco East Bay region. The company now operates from a fully equipped fabrication facility at 3555-C First Street in Livermore while maintaining its fleet of mobile welding trucks for on-site services.

The expansion addresses growing demand from businesses across the Tri-Valley and greater East Bay area, including Hayward, Oakland, Union City, Walnut Creek, and Alameda, for both in-shop fabrication projects and immediate on-site welding repairs. The dual-capability model allows commercial clients to choose between bringing projects to the fabrication facility or having skilled welders come directly to their locations.

"Commercial and industrial facilities need flexibility when it comes to metal fabrication and welding services," said Kyle Shannon, owner of HRT Mobile Welding. "Some projects require the precision and equipment available in our shop environment, while others demand immediate on-site attention to minimize operational downtime. By offering both options, we can accommodate the full spectrum of fabrication needs for

businesses throughout the East Bay."

HRT Mobile Welding metal fabrication services encompass a wide range of applications for commercial clients, from custom structural steel components to specialized equipment repairs. The company's fabrication facility houses professional-grade equipment for cutting, forming, and welding various metal types, while the mobile units carry comprehensive welding equipment capable of performing MIG, TIG, and stick welding processes at client locations.

The company's service area spans the entire East Bay region, with particular focus on supporting manufacturing facilities, warehouses, construction sites, and industrial operations that require reliable welding and fabrication support. The mobile service component proves especially valuable for businesses with large machinery or permanently installed equipment that cannot be transported for repairs.

Structural steel fabrication represents a significant portion of the company's commercial work, supporting construction projects and facility expansions throughout Livermore and surrounding communities. The in-shop facility enables precise fabrication of steel components to exact specifications, while mobile crews can perform on-site welding for structural installations and modifications.

The timing of the expanded services aligns with increased construction and industrial activity across the East Bay, where businesses seek local fabrication partners capable of meeting tight deadlines and technical specifications. The combination of shop-based fabrication and mobile welding capabilities positions the company to serve as a comprehensive metalworking resource for the region's commercial sector.

HRT Mobile Welding maintains California State License Board certification (License 1132921) and employs certified welders trained in various welding processes and metal types. The company serves commercial and industrial clients exclusively, focusing on business-to-business relationships that require professional-grade welding and fabrication services. Founded in October 2024, the company has quickly established itself as a resource for East Bay businesses requiring both planned fabrication projects and emergency welding repairs.
