

HRT Mobile Welding Expands Heavy Equipment Repair Services Across Bay Area Industrial Sector

July 23, 2026

LIVERMORE, CA - July 23, 2026 -

HRT Mobile Welding, a licensed mobile welding and machining shop based in Livermore, California, has expanded its specialized heavy equipment repair services to meet growing demand from construction and industrial clients throughout the Tri-Valley and East Bay regions. The company's comprehensive approach to equipment maintenance includes bucket repair, hard facing, pin and sleeve machining, and line boring services designed to extend the operational life of construction and industrial machinery.

The expansion comes as industrial facilities and construction companies face increasing pressure to minimize equipment downtime while managing maintenance costs. HRT Mobile Welding addresses these challenges by bringing professional welding and machining capabilities directly to client locations, eliminating the need to transport heavy machinery to off-site repair facilities.

"Heavy equipment represents a significant capital investment for any construction or industrial operation, and proper maintenance can double or triple the useful life of these assets," said Kyle Shannon, owner of HRT Mobile Welding. "Our mobile capabilities allow us to perform complex repairs and modifications on-site, whether that's resurfacing a worn excavator bucket or precision machining pin and bushing assemblies.

We've seen firsthand how regular maintenance and timely repairs can prevent catastrophic failures that could cost operators tens of thousands of dollars in replacement equipment and lost productivity."

The company operates two fully equipped mobile welding trucks alongside an in-shop facility, enabling technicians to handle both emergency repairs and planned maintenance projects. This dual-capability model has proven particularly valuable for clients with equipment that cannot be easily transported or operations requiring after-hours service to avoid production interruptions.

HRT Mobile Welding heavy equipment welding services encompass a range of specialized techniques critical to maintaining industrial machinery. Hard facing applications restore worn surfaces on buckets, blades, and other ground-engaging tools, significantly extending their service life in abrasive conditions. Pin and sleeve machining services address one of the most common wear points in hydraulic equipment, restoring proper tolerances and eliminating play in critical joints. Line boring capabilities allow for precision repair of worn pivot points and bearing surfaces without removing equipment from service.

The company's client base includes construction contractors, material handling facilities, and industrial operations throughout the region, with past projects completed for major entities including the Port of Oakland. Licensed under CSLB License 1132921, HRT Mobile Welding maintains the certifications and insurance coverage required for work at industrial facilities and construction sites.

Founded in October 2024, HRT Mobile Welding emerged from recognition of a service gap in the regional market for responsive, professional mobile welding services. The company's technicians utilize MIG, TIG, and stick welding processes to accommodate various metal types and project specifications, from structural steel fabrication to precision component repair.

The company serves the entire Tri-Valley area including Livermore, Pleasanton, Dublin, San Ramon, and surrounding East Bay communities, providing both scheduled maintenance services and emergency repair response for critical equipment failures.
