

Fito Plumbers Inc Expands Trenchless Sewer Repair Services Across Alameda County

July 02, 2026

LIVERMORE, CA - July 02, 2026 -

Fito Plumbers Inc, a licensed plumbing contractor serving Alameda County from locations in Livermore and Hayward, has expanded its trenchless sewer repair and horizontal directional drilling capabilities to meet growing demand for minimally invasive infrastructure solutions throughout the East Bay region.

The expansion comes as aging sewer systems in older East Bay homes increasingly require replacement or significant repairs. Traditional excavation methods often damage landscaping, driveways, and sidewalks, leading property owners to seek alternative solutions that preserve their property while addressing critical infrastructure needs.

As an EBMUD Authorized Contractor and City of Castro Valley Authorized Contractor, the company brings specialized expertise in private sewer lateral work, professional leak detection, and advanced trenchless technologies. These credentials enable the firm to perform compliance work required by local municipalities while minimizing disruption to residential and commercial properties.

"Property owners throughout Alameda County are discovering that trenchless technology offers a practical solution for sewer line replacement without the extensive excavation that traditional methods require," said Rosy Lopez, Operations Manager at Fito Plumbers. "Our horizontal directional drilling capabilities allow us to replace entire sewer laterals in a single day, preserving mature landscaping and hardscaping that would otherwise require months or years to restore."

The company's trenchless sewer repair process utilizes specialized equipment to create small access points rather than excavating entire pipe runs. This approach proves particularly valuable for properties with mature trees, established gardens, or recently installed driveways and patios. The technology also enables repairs beneath structures, roadways, and other obstacles that would make traditional excavation impractical or impossible.

Horizontal directional drilling represents another key capability in the company's service portfolio. This

technique allows for the installation of new utility lines with minimal surface disruption, making it ideal for both residential sewer lateral replacements and larger commercial projects. The process involves drilling a pilot hole along a predetermined path, then enlarging the hole to accommodate the new pipe while simultaneously pulling it into place.

Professional leak detection services complement the company's repair capabilities by identifying problems before they escalate into emergencies. Using advanced acoustic equipment and video inspection technology, technicians can pinpoint leak locations without exploratory excavation, reducing both diagnostic time and repair costs.

The focus on older East Bay homes addresses a significant regional challenge. Many residential properties in communities such as Berkeley, Oakland, San Leandro, and Castro Valley feature sewer laterals installed decades ago using materials that deteriorate over time. Clay pipes common in pre-1970s construction are particularly susceptible to root intrusion and ground movement damage.

Private sewer lateral compliance has become increasingly important as municipalities implement inspection requirements for property transfers and certain remodeling projects. As an authorized contractor for multiple jurisdictions, the company maintains current knowledge of varying local requirements and inspection protocols.

Fito Plumbers operates around the clock from its Livermore headquarters at 5210 Doolan Road and its Hayward location at 2020 Hill Avenue. The company holds California State License Board License 1019265 (C-36) and maintains the bonding and insurance required for both residential and commercial projects throughout the San Francisco Bay Area.
