Restoration Health Chiropractic Provides Chiropractic Care For Auto Accident Injuries in Little Rock, AR

June 11, 2026

LITTLE ROCK, AR - June 11, 2026 -
Restoration Health Chiropractic provides neurologically-based corrective chiropractic care for individuals who have experienced auto accidents in Little Rock, AR. The practice addresses common injuries such as whiplash through thorough evaluations and personalized treatment plans based on its established protocols.

Whiplash is a frequent outcome of rear-end collisions and other vehicle impacts. This injury occurs when the head and neck are abruptly whipped from back to front, potentially leading to damage in the spine, soft tissues, discs, ligaments, muscles, and nerves. Symptoms may include neck pain, shoulder and upper back pain, headaches, dizziness, numbness or tingling in the arms, difficulty sleeping, and reduced range of motion. These effects can appear immediately or develop weeks or months later.

The practice lists whiplash among the conditions it has experience helping patients with. Its approach focuses on restoring spinal alignment to support natural healing processes and nervous system function. Initial appointments involve a one-on-one consultation with a doctor to discuss the incident and health goals. This is followed by a complete spinal examination that includes motion and static palpation, range of motion assessment, digital posture analysis, orthopedic and neurological testing, and digital motion X-rays. These real-time imaging tools allow observation of joint function and identification of issues not visible in standard static images.

Chiropractic adjustments in Little Rock at Restoration Health Chiropractic incorporate Chiropractic Biophysics techniques. This method is supported by over 150 peer-reviewed studies and seven textbooks. It draws on principles of anatomy, physiology, neurology, physics, and geometry to create individualized corrective protocols aimed at restoring normal spinal alignment.

Dr. Michael Butler, Owner and Chief Vision Officer at Restoration Health Chiropractic, said, "Auto accidents can create misalignments and soft tissue injuries that benefit from targeted corrective care to address

underlying structural issues and support recovery."

The clinical team includes professionals with relevant backgrounds. Dr. Michael Butler, a native of Hope, Arkansas, earned a bachelor's degree in nutrition from the University of Central Arkansas and his doctor of chiropractic degree from Life University. He received advanced training in Chiropractic Biophysics, pediatrics, maternal care, and full spine techniques. His experience as a multi-sport athlete and personal trainer informs his approach to health and recovery.

Dr. Keith Beachy serves as Lead Doctor. An Arkansas native from Fort Smith, he holds board certifications in chiropractic and functional medicine and certification in neuropathy. He completed a bachelor's degree in exercise science from the University of Arkansas and his doctor of chiropractic degree from Parker University. His prior work in an integrated medical setting highlighted the potential of holistic methods to support healing without reliance on drugs or surgery in certain cases.

Restoration Health Chiropractic's mission is to serve the community through neurologically-based corrective chiropractic care. Its vision is to empower individuals to make informed health decisions for their families, promoting a generation less dependent on medications and better able to fulfill their purposes. Patient education is a key part of care, helping individuals understand injury mechanisms and supportive strategies for recovery.

Following an auto accident, the practice emphasizes the importance of evaluation even if symptoms seem minor initially. The comprehensive assessment process helps differentiate spinal and neurological factors from other potential contributors. Treatment plans are customized based on findings, with a focus on full spine techniques where appropriate to address compensatory patterns that may develop after trauma.

The state-of-the-art facility provides a comfortable environment for patients recovering from injuries. Digital tools and objective testing support precise monitoring of progress in alignment, mobility, and function over time. The team integrates findings to guide ongoing care that targets root causes rather than isolated symptoms.

This focus on post-accident care aligns with the practice's broader commitment to non-invasive methods for musculoskeletal concerns. Educational resources on the website complement in-office services by providing information on common auto accident injuries like whiplash and related spinal issues. The practice continues to apply consistent protocols to help patients regain mobility and comfort following such events.

Restoration Health Chiropractic maintains a patient-centered model. Appointments follow structured processes that prioritize detailed assessment and tailored recommendations. The Conway location extends similar access for those in surrounding areas, upholding the same standards.

The team's collective expertise in chiropractic, functional medicine, exercise science, and biomechanics supports comprehensive management of auto accident-related conditions. By addressing spinal misalignments and nervous system interference, the practice aims to facilitate the body's natural healing responses.

Restoration Health Chiropractic operates with a foundation in scientifically informed chiropractic principles. Its services for individuals affected by auto accidents reflect ongoing dedication to community wellness through corrective care and patient education.
