

TAS Electronics Now Offers Smartphone-Controlled Remote Car Starters, Letting Drivers Start Their Vehicle from Anywhere in the World

June 11, 2026

Holland, Ohio - June 11, 2026 -
TAS Electronics, a mobile technology retailer serving Northwest Ohio and Southeast Michigan since 1973, has announced the full rollout of its Drone Mobile-enabled TAS Electronics automatic car starter service, expanding its remote start offerings to include GPS tracking, two-way communication, and unlimited-range vehicle control through a smartphone application, regardless of distance.

The company notes that its automatic car starter installations are now available for a wide range of vehicle makes and models, including push-to-start vehicles, diesel engines, and manual transmissions ? vehicle types that many competing installers decline to service.

TAS Electronics installs a Compustar remote starter paired with a Drone Mobile module directly into the customer's vehicle. Once configured, the system provides remote start and stop through a smartphone application, real-time GPS vehicle tracking, two-way status alerts for events such as door-ajar notifications,

engine temperature changes, and security triggers, as well as remote lock and unlock capability. Optional add-ons include trunk release, panic button, and driver's door priority unlock. Installation is performed without cutting any factory wires, preserving the original vehicle integrity, and most installations are completed the same day.

"We have installed over 135,000 remote car starters across the region, and the most consistent request we receive today is from drivers who want to control their vehicle from their phone. Drone Mobile makes that possible from a remote location." ? Dave Granata, General Manager, TAS Electronics

For drivers who prefer not to carry an additional remote, TAS Electronics also offers Compustar DCX installations that integrate directly with the vehicle's existing factory key fob or smart key. A triple-press of the lock button activates remote start without requiring any additional hardware.

?Too many drivers are told 'no' simply because a shop doesn't have the expertise to handle their vehicle. At TAS Electronics, that's not something we say. Whether it's a push-to-start system, a diesel engine, or a manual transmission and more, our certified technicians have the skills and experience to get it done ? and done right." - Dave Granata, General Manager, TAS Electronics

Founded in 1973, TAS Electronics has operated as a mobile electronics retailer in the Holland, OH area for more than five decades. The company has completed more than 135,000 remote car starter installations across a wide range of vehicle makes and models, including vehicles that other installers have declined to service.

"Having installed more than 135,000 remote car starters over the years, our team has seen consistent interest in solutions that make vehicles more comfortable and convenient in all seasons. Customers increasingly ask for smartphone connectivity and factory-style integration when selecting an automatic car starter system." ?Dave Granata, General Manager, TAS Electronics

The Drone Mobile-enabled remote car starter service is available now at TAS Electronics, located at 1510 S. McCord Road, Holland, OH 43528. The store is open Monday through Saturday from 9 a.m. to 5 p.m. Additional information is available at taselectronics.com/remote-car-starters or by calling (419) 867-7788.
