

## **Bullyan RV Center Provides Summer RV Travel Guidance**

*June 11, 2026*

DULUTH, MN - June 11, 2026 - PRESSADVANTAGE -

Bullyan RV Center is sharing practical guidance on summer RV travel as Minnesota enters the peak camping months of June. With warmer temperatures and increased activity at state parks and lakes, preparation helps ensure safe, comfortable outings for fifth wheels, travel trailers, and other recreational vehicles.

Bullyan RV Center, a family-owned dealership in Duluth that has served the Northland region since 1954, operates a full-service facility with 24 maintenance and repair bays. The dealership works with new and used RVs from manufacturers such as Forest River, Keystone, and Grand Design. Its team offers insights tailored to regional conditions to help customers meet seasonal demand.

Marketing Manager Charlie Bedor commented, "As summer temperatures rise in Minnesota, proper preparation, including air conditioning checks and tire monitoring, helps ensure reliable performance and enjoyable trips for families heading to local campgrounds and beyond."

Common considerations for hot-weather travel include inspecting air conditioning systems to maintain interior comfort during extended use. Adjustments to tire pressure account for heat expansion that can occur with

higher ambient temperatures. Verification of the battery and electrical systems helps prevent power-related issues that are common in warm conditions. Freshwater system sanitization, awning operation tests, and slide-out mechanism reviews also form part of the standard readiness steps. These measures help address challenges associated with elevated temperatures and humidity during June and the later summer months in the Northland area.

The dealership's RV service department manages routine tasks such as follow-up de-winterization, appliance functionality assessments, and generator testing. Support covers a range of RV configurations, from larger luxury fifth wheels to more compact travel trailers suited for Minnesota destinations. Industry patterns show increased service activity at dealerships during this period as owners ready their units for extended use in parks and lakeside locations.

Bullyan RV Center maintains a 48,500-square-foot facility that includes indoor showroom space alongside repair capabilities. The business has grown through decades of family operation, incorporating parts inventory and specialized knowledge to assist customers. Team members collaborate with individuals to evaluate needs related to floorplans, vehicle lengths, weights, and planned travel styles for summer adventures across the region.

Observations from RV operations indicate that proactive attention to heat-related factors reduces the likelihood of disruptions during peak travel times. Examples include examination of roof seals, refrigerator ventilation, and leveling equipment to promote stability at campsites. Guidance also encompasses fluid-level monitoring of oil, coolant, and transmission systems as ambient temperatures rise. Reflective window covers can help manage interior heat buildup, while checks on the overall cooling system support engine performance under load. Such practices align with customer discussions at the dealership regarding preparation for Northland-area activities throughout the warmer months.

As June advances, Bullyan RV Center continues to support both new inventory selections and maintenance for vehicles already in service. Additional travel considerations include balanced loading for towing stability and strategies to manage weather effects on interior environments. Appointments for service allow owners to address unit-specific requirements, whether for newly acquired models or those in ongoing use. Ventilation techniques and campsite shade planning further enhance overall comfort when setting up at Minnesota campgrounds. Monitoring for signs of wear on seals and components helps ensure long-term reliability during repeated outings.

Bullyan RV Center supports regional RV enthusiasts through resources tailored to Minnesota conditions. Recommendations draw from experience with local parks, lake access, and seasonal variations. This assistance supports the community of travelers, from brief weekend excursions to longer summer journeys across the area, contributing to safer and more satisfying experiences on the road.
