

fassadenmax GmbH Expands Drone-Based Roof Cleaning Services Across Zurich Region

July 16, 2026

NIEDERHASLI, ZH - July 16, 2026 -

fassadenmax GmbH, the Niederhasli-based facade and roof cleaning specialist, has expanded its drone-assisted cleaning services throughout the Zurich canton to meet increasing demand for scaffold-free facade cleaning solutions. The company, which launched operations in May 2024, reports a significant uptick in requests for environmentally conscious building maintenance services that eliminate the need for traditional scaffolding.

The expansion comes as property owners across the region seek alternatives to costly facade repainting and conventional cleaning methods. By utilizing advanced drone technology combined with telescopic lance systems, the company now services commercial and residential properties throughout German-speaking Switzerland from its Niederhasli headquarters at Gewerbestrasse 18.

The adoption of drone technology in building maintenance represents a fundamental shift in how we approach facade cleaning Zurich properties, the company notes. Property owners are discovering that 90

percent of facade contamination consists of biological growth like algae, fungi, and moss that can be effectively removed without scaffolding, eliminating the expense and disruption of traditional methods.

The company's three-step cleaning process begins with specialized pre-treatment of affected surfaces, followed by gentle low-pressure rinsing that preserves the integrity of building materials. The final application of long-term sealant protection prevents biological regrowth for several years, significantly extending the time between necessary cleanings.

This methodology proves particularly effective for roof cleaning Niederhasli area properties, where traditional access methods often prove challenging and expensive. The drone-based approach allows technicians to assess and clean all roof surfaces, including steep angles and hard-to-reach areas that conventional methods might miss.

Beyond standard facade and roof services, fassadenmax GmbH has observed growing interest in photovoltaic system cleaning throughout Kanton Zürich. Solar panel efficiency can decrease significantly when covered with dust, pollen, and biological growth. The company's specialized cleaning techniques restore panels to optimal performance levels, with many clients reporting measurable increases in energy production following service.

The technology works effectively across all common building substrates found in Swiss construction, including plaster, fiber cement Eternit panels, natural stone, metal cladding, glass surfaces, and traditional roof tiles. Each material receives customized treatment appropriate to its composition and condition.

Property managers and building owners interested in assessing the technology's effectiveness can request a free test area demonstration by calling 0840 880 880 or locating fassadenmax on Google Maps.

fassadenmax GmbH operates from three strategic locations across Switzerland, with the Zurich-area facility in Niederhasli serving as a primary hub for the canton. The company specializes in sustainable building maintenance solutions that extend the lifespan of facades and roofing systems while reducing the environmental impact associated with premature repainting and material replacement.
