

Promont Wellness Earns 2026 Best of Business Rate Award for Mental Health Excellence

June 18, 2026

SOUTHAMPTON, PA - June 18, 2026 -

Promont Wellness, a leading mental health and addiction treatment facility in Southampton, Pennsylvania, has received the 2026 Best of BusinessRate Award for Mental Health Clinics, recognizing the center's commitment to providing comprehensive outpatient recovery services during a critical period for mental health and substance abuse treatment in the state.

The award comes as Pennsylvania continues to address significant challenges in addiction and mental health care accessibility. The recognition highlights the facility's role in expanding treatment options for individuals seeking flexible, evidence-based recovery programs that accommodate work, family, and personal responsibilities.

"This recognition reflects our dedication to meeting the evolving needs of individuals struggling with addiction and mental health challenges," said Joseph Zeiger of Promont Wellness. "The award validates our approach of providing accessible, high-quality outpatient services that allow clients to maintain their daily routines while

receiving the intensive support they need for sustainable recovery."

The Best of BusinessRate Award evaluates mental health clinics based on multiple criteria, including treatment outcomes, client satisfaction, program innovation, and community impact. The selection process considers facilities that demonstrate excellence in delivering comprehensive care while maintaining high standards of clinical practice.

As a drug rehab center in Bucks County, Pennsylvania, the facility offers multiple levels of care designed to address varying degrees of treatment needs. The center's programs incorporate evidence-based therapeutic modalities, including cognitive behavioral therapy, dialectical behavior therapy, and trauma-informed care approaches. These services are structured to provide individualized treatment plans that address both substance use disorders and co-occurring mental health conditions.

The facility's intensive outpatient program (IOP) serves as a cornerstone of its treatment offerings, providing structured therapy sessions multiple times per week while allowing clients to return home each evening. This program format has proven particularly effective for individuals transitioning from higher levels of care or those beginning their recovery journey with strong home support systems.

Bucks County, Pennsylvania, has experienced persistent challenges in addressing substance abuse and mental health needs, with recent data indicating continued demand for accessible treatment options. The recognition of facilities providing quality outpatient services underscores the importance of expanding treatment availability beyond traditional residential programs.

The award acknowledgment arrives as the facility continues to adapt its services to meet community needs, incorporating telehealth options and flexible scheduling to reduce barriers to treatment access. These adaptations have enabled the center to serve a broader population of individuals who might otherwise face obstacles in accessing consistent mental health and addiction treatment.

Promont Wellness specializes in treating substance use disorders, depression, anxiety, trauma-related conditions, and dual diagnosis cases. The facility employs a multidisciplinary team of licensed therapists, counselors, and medical professionals who work collaboratively to deliver integrated treatment approaches. The center emphasizes the importance of addressing underlying mental health conditions alongside addiction treatment to support long-term recovery success.
