K L Contractor Plumbing Inc Releases New Homeowner Guide on Common Plumbing Issues in Smyrna, GA

July 06, 2026

MARIETTA, GA - July 06, 2026 -

K L Contractor Plumbing Inc has published a new educational resource titled "Common Plumbing Problems in Smyrna: Bungalows, Condos, and New Construction." The guide was released through the company's blog and focuses on plumbing issues commonly found in older homes, condominiums, and newer residential developments in the Smyrna area.

The publication examines how a property's age and design can influence the plumbing issues residents may encounter. According to the guide, plumbing systems in older homes, multi-unit buildings, and recently constructed townhomes often present different maintenance and repair challenges.

The new resource highlights several issues plumbers commonly address, including running toilets, water heater failures, low water pressure, drain clogs, and hidden leaks. It also discusses how aging infrastructure, original pipe materials, and builder-grade fixtures can affect long-term plumbing performance.

"Many homeowners assume plumbing problems are the same from one property to the next, but housing type plays a major role in the issues that develop over time," said Alex Laldin, Marketing Director for K L Contractor Plumbing Inc. "The purpose of this guide is to help residents recognize common warning signs and better understand the plumbing conditions that may exist in different types of homes."

According to the guide, running toilets remain one of the most common plumbing complaints. The company notes that worn internal toilet components can lead to continuous water waste and higher utility bills if they are not repaired.

The resource also addresses water heater concerns that vary by housing type. Older homes may experience problems related to aging equipment and sediment buildup, while newer properties can encounter issues tied to lower-cost fixtures and components installed during construction. The guide explains that understanding a water heater's age and condition can help homeowners identify maintenance needs before a complete failure occurs.

Another topic covered in the publication is low water pressure. The guide explains that older homes may experience reduced pressure due to pipe corrosion and restricted water lines, while pressure-related issues in newer properties may stem from different causes. The company encourages property owners to investigate ongoing pressure changes rather than accepting them as normal.

Drain and sewer performance is also discussed as a common concern. The guide notes that kitchen drain clogs, grease buildup, and accumulated debris can affect older plumbing systems. In multi-unit buildings, drainage issues may involve shared plumbing infrastructure, making diagnosis more complex than in a single-family home.

The publication also addresses hidden leaks and water line problems that may not be immediately visible. The company explains that unexplained increases in water usage, damp areas, and unusual sounds within plumbing systems can indicate issues that require professional evaluation. Identifying these conditions early may help reduce the risk of more extensive property damage.

In addition to outlining common plumbing problems, the guide encourages homeowners to distinguish between issues that may be resolved through routine maintenance and those that require professional assessment. The company notes that recognizing warning signs early can help prevent minor plumbing concerns from developing into larger repairs.

K L Contractor Plumbing Inc stated that the educational resource was developed based on the company's experience working with a variety of residential property types throughout the metro Atlanta area. The company regularly publishes informational content to help homeowners better understand plumbing systems

and maintenance concerns.

K L Contractor Plumbing Inc provides residential and commercial plumbing services throughout the metro Atlanta region. Its services include drain cleaning, water heater repair and replacement, water line repairs, sewer line services, general plumbing repairs, and related plumbing solutions for homes and businesses.
