

Encore Data Products Expands Soundnetics Audio Line with USB-C Connectivity and Color Options

July 01, 2026

LAFAYETTE, CO - July 01, 2026 -

Encore Data Products, a leading provider of educational technology and audio equipment, today announced the expansion of its Soundnetics product line to include new color options and USB-C connectivity features. The enhanced offerings address the evolving needs of modern classrooms and educational institutions transitioning to newer device standards.

The expansion comes as schools nationwide continue upgrading their technology infrastructure to support digital learning environments. The addition of USB-C compatibility ensures seamless integration with the latest tablets, laptops, and Chromebooks that have adopted the universal connector standard. The new color-coded options enable educators to organize classroom audio equipment more effectively, supporting differentiated learning groups and helping maintain equipment inventory.

The Soundnetics product line includes various configurations designed for classroom use, such as the popular soundnetics 10 pack, which provides schools with a cost-effective solution for equipping multiple

students simultaneously. These bulk packages have become essential for computer labs, testing centers, and collaborative learning spaces where multiple students require individual audio equipment.

"Educational institutions have been requesting more versatile audio solutions that align with their updated device ecosystems," said a spokesperson from Encore Data Products. "The introduction of USB-C connectivity and color variations in our Soundnetics line reflects our commitment to meeting these specific classroom needs while maintaining the durability and quality educators expect."

The company's comprehensive range of headphones with microphones supports interactive learning applications, from language instruction to online assessments. The addition of USB-C connectivity eliminates the need for adapters when connecting to newer devices, reducing potential points of failure and simplifying classroom technology management.

Beyond the technical enhancements, the introduction of color options serves practical classroom management purposes. Teachers can now assign specific colors to different student groups, grade levels, or subject areas, making equipment distribution and collection more efficient. This organizational feature has proven particularly valuable in shared learning spaces where multiple classes utilize the same equipment throughout the day.

The expanded Soundnetics line maintains the durability standards that have made Encore Data Products a trusted supplier to educational institutions. Each unit undergoes rigorous testing to ensure it can withstand the demands of daily classroom use while delivering consistent audio quality for extended periods.

Based in Lafayette, Colorado, Encore Data Products specializes in providing audio and technology products for schools, libraries, and businesses. The company offers a comprehensive range of educational technology solutions, including headphones, AV technology, charging stations, and classroom accessories. Their product portfolio extends beyond audio equipment to include document cameras, interactive displays, PA systems, and specialized solutions for language interpretation and distance learning. The company also provides hygiene and maintenance products, including electronic sanitizers and protective covers, ensuring that shared classroom equipment remains clean and safe for student use.
