

Good Day Garage Doors Maryville Shares Essential Summer Maintenance Guidance for Homeowners

June 19, 2026

MARYVILLE, TN - June 19, 2026 - PRESSADVANTAGE -

Good Day Garage Doors Maryville has released timely maintenance guidance for homeowners as summer activities increase garage door usage across East Tennessee. The seasonal advisory addresses common wear patterns that emerge when families rely more heavily on their garages for vehicle storage, yard equipment access, bicycles, and home improvement projects.

The Maryville-based garage door service company notes that summer months typically see a 40 percent increase in garage door cycling as households move between indoor and outdoor activities. This heightened usage can accelerate wear on critical components, making preventive maintenance particularly important during the warmer months.

"Summer represents our busiest season not just for repairs, but for preventable issues that proper maintenance could have addressed," said Lior Hason, owner of Good Day Garage Doors Maryville. "When families are constantly accessing lawn mowers, sports equipment, and workshop tools, their garage doors

work overtime. Simple maintenance tips can prevent those frustrating moments when the door fails right when you need it most."

Common summer-related garage door issues include noisy operation from dried rollers, loose hardware from vibration and temperature changes, spring strain from increased cycling, opener delays due to overheating components, and sensor misalignment from lawn equipment bumps. These problems often develop gradually but can lead to complete door failure if left unaddressed.

Rollers and hinges require particular attention during summer months. The combination of heat, dust, and frequent use can cause lubrication to break down faster than during cooler seasons. Metal components expand and contract with temperature fluctuations, potentially loosening bolts and brackets that secure the door system.

Garage door springs face additional stress during summer as doors open and close more frequently. A typical residential torsion spring is rated for approximately 10,000 cycles, and increased summer usage can significantly reduce this lifespan. Regular inspection helps identify early signs of spring fatigue before complete failure occurs.

Modern garage door openers contain sensitive electronics that can struggle in extreme heat. Tennessee's humid summers can cause condensation inside opener units, while direct sunlight on metal doors can create temperatures exceeding manufacturer specifications. Opener delays or inconsistent operation often indicate heat-related stress on motor components.

Safety sensors require special attention during summer when lawn care activities increase. Grass clippings, dust, and accidental contact from garden tools can knock sensors out of alignment or coat lenses with debris. Regular cleaning and alignment checks ensure these critical safety features function properly.

Good Day Garage Doors Maryville serves Blount County and surrounding East Tennessee communities with comprehensive garage door services. The family-owned company specializes in residential and commercial door repair, installation, and preventive maintenance. With over 1,300 five-star reviews and 4,500 satisfied customers, the company has established itself as a trusted resource for garage door expertise in the region. The company maintains a dedicated Maryville office at 1004 W Broadway Ave Suite 6, providing same-day service for emergency repairs and routine maintenance throughout the area.
