

North Star Heating & Air Conditioning Marks 28 Years Serving West Jordan Residents

June 23, 2026

WEST JORDAN, UT - June 23, 2026 -
North Star Heating & Air Conditioning, a second-generation family-owned HVAC service provider, marks 28 years of operations in West Jordan and surrounding Utah communities, maintaining its education-first approach to residential heating and cooling services.

The West Jordan-based company, established in 1998, has expanded its service area to include the entire Wasatch Front, including Salt Lake County, Utah County, Sandy, and Lehi. The company attributes its longevity to its root-cause diagnosis methodology and transparent communication practices with homeowners.

"Over the past 28 years, the HVAC industry has evolved significantly with new technologies and efficiency standards," said Terry Kelsch, owner of North Star Heating & Air Conditioning. "Our approach has remained consistent - we educate homeowners about their systems and provide clear explanations of their options before any work begins."

The company provides air conditioning repair, installation, and maintenance services, along with furnace repair and installation, heat pump systems, mini split installation, duct cleaning, and indoor air quality solutions. The service portfolio also includes plumbing services and financing options for system replacements.

North Star Heating & Air Conditioning operates with after-hours response capabilities and maintains service vehicles equipped for immediate repairs. The company's service process includes system inspection, option presentation, and completion of necessary repairs or installations.

Industry data indicates that homeowners increasingly prioritize contractors who provide detailed explanations and multiple service options. According to recent HVAC market research, transparent pricing and educational approaches rank among the top factors consumers consider when selecting service providers.

The company's second-generation ownership structure reflects broader trends in the HVAC industry, where family-owned businesses comprise approximately 70 percent of contractors nationwide. These businesses often emphasize community relationships and long-term service commitments.

"Technical expertise represents only one aspect of HVAC service," added Kelsch. "Understanding household needs, budget considerations, and long-term maintenance requirements helps homeowners make informed decisions about their comfort systems."

The company's service area expansion throughout the Wasatch Front coincides with Utah's residential growth, particularly in West Jordan where housing development has increased substantially over the past decade. The region's temperature extremes, ranging from summer highs above 100 degrees to winter lows below freezing, create year-round demand for reliable HVAC services.

For detailed information about available services, homeowners can visit https://northstarheatingandairutah.com/services to explore heating, cooling, and indoor air quality solutions.

North Star Heating & Air Conditioning has operated since 1998, providing residential HVAC services throughout the Wasatch Front. The family-owned company specializes in heating and cooling system installation, repair, and maintenance, along with indoor air quality solutions and duct cleaning services.
