

North Star Heating & Air Conditioning Reinforces Commitment to Transparent HVAC Services for Utah Homeowners

June 19, 2026

LEHI, UT - June 19, 2026 -
North Star Heating & Air Conditioning, a second-generation family-owned HVAC contractor serving Utah communities for over 30 years, continues to distinguish itself through transparent pricing practices and honest service recommendations as homeowners face increasing concerns about contractor reliability in the heating and cooling industry.

The Lehi-based company maintains its foundational approach of guiding customers toward appropriate solutions rather than promoting unnecessary upgrades, a practice that has become increasingly important as Utah homeowners navigate complex HVAC decisions amid rising energy costs and evolving efficiency standards.

"After three decades in this industry, we've seen how confusion and mistrust can develop when contractors prioritize sales over service," said Terry Kelsch, owner of North Star Heating & Air. "Our approach has

always been different. We educate homeowners about their options, explain what their system actually needs, and let them make informed decisions without pressure. That transparency has been the cornerstone of our family business since day one."

The company's commitment to straightforward service extends across its comprehensive range of offerings, including air conditioning installation and repair, furnace maintenance, heat pump systems, duct cleaning, and indoor air quality improvements. Each service area reflects the same philosophy of providing clear explanations and honest assessments that help homeowners understand their HVAC systems better.

North Star Heating & Air Conditioning employs technicians who undergo continuous training to stay current with modern HVAC technology while maintaining the company's core values of integrity, hard work, and education. All team members are background-checked, drug-tested, and professionally certified, ensuring homeowners receive service from qualified professionals who understand both technical requirements and customer service excellence.

The emphasis on education and transparency becomes particularly valuable during seasonal transitions when heating and cooling systems require attention. Rather than pushing immediate replacements, the company's technicians assess each situation individually, providing detailed explanations of system conditions and offering multiple solution options when repairs or replacements become necessary.

"Homeowners deserve to understand what's happening with their HVAC systems," added Kelsch. "Whether we're performing routine maintenance or addressing an emergency repair, we take time to explain our findings, discuss options, and ensure customers feel confident about their decisions. This educational approach helps families make smart investments in their home comfort systems."

The company's service area spans across Salt Lake, Utah, Davis, Summit, and Tooele Counties, with 24/7 emergency service availability for urgent heating and cooling issues. This extensive coverage ensures that Utah families have access to reliable HVAC support when unexpected system failures occur.

As a fully licensed, certified, and insured contractor, North Star Heating & Air maintains strict standards for quality and safety. The company never subcontracts work to unlicensed individuals, ensuring that every service call meets professional standards and regulatory requirements.

North Star Heating & Air Conditioning operates from its headquarters at 3300 Triumph Blvd Suite 107 in Lehi, Utah 84043.
