ABT Foundation Solutions Invests in New Equipment to Enhance Service Capabilities in Northeast Wisconsin

June 17, 2026

NEENAH, WI - June 17, 2026 -
ABT Foundation Solutions, a provider of foundation and basement services in Northeast Wisconsin since 2002, has invested in updated equipment to support its growing project volume. The acquisition aligns with the company's commitment to efficient operations as it completes 800 to 1,200 projects annually for residential and commercial properties across the region. This development reflects ongoing efforts to maintain high standards in foundation repair and related services amid variable local soil and weather conditions.

The new equipment enhances capabilities for tasks such as concrete leveling, basement waterproofing, and foundation stabilization. Specialized tools and vehicles improve precision in polyjacking applications, where expanding foam is injected to lift settled slabs, as well as in the installation of drainage systems and structural reinforcements. Technicians benefit from equipment designed for minimal site disruption, allowing faster project turnaround while upholding quality. This investment supports the company's full-service approach, which integrates multiple solutions to address interconnected property issues.

ABT Foundation Solutions begins most projects with a free inspection as standard practice. During these

evaluations, teams assess conditions using precise measurement tools and recommend tailored interventions based on site-specific data. Crews, who participate in weekly training sessions, apply certified techniques in foundation repair and basement waterproofing. The updated equipment complements this expertise by streamlining material handling and installation processes suited to Northeast Wisconsin's freeze-thaw cycles and clay soils.

Mickey Stachurski, Co-Owner of ABT Foundation Solutions, commented on the strategic enhancement. "This equipment investment allows our teams to deliver even more reliable results while maintaining efficiency across a high volume of projects," Stachurski said. The company differentiates itself through consistent project outcomes and an A-plus rating with the Better Business Bureau, achieved via in-house capabilities and ongoing professional development for all staff members.

The equipment upgrade contributes to measurable improvements, such as reduced project durations and enhanced safety protocols during installations. For example, advanced lifting systems support concrete leveling work that restores proper drainage slopes on driveways, patios, and walkways, limiting further soil erosion near foundations. Similar benefits extend to gutter installations and egress window projects, where precise excavation and placement minimize impact on surrounding landscapes.

ABT Foundation Solutions coordinates these capabilities within its broader offerings, including crawl space repair and comprehensive waterproofing systems with sump pumps. Documentation for property owners details work performed and maintenance guidance, backed by warranties on completed scopes. Estimators provide transparent explanations during consultations, enabling informed decisions grounded in assessment findings.

Stachurski added insight into long-term planning. "Investing in modern equipment supports our ability to meet the needs of Northeast Wisconsin properties with solutions that emphasize durability and performance," he said. All team members, from project managers to installers, engage in continuous training to maximize the benefits of these tools.

This development builds on the company's history of adapting to regional demands since its founding. Free inspections remain the standard entry point, offering detailed evaluations without obligation. The integrated service model ensures that equipment enhancements translate to cohesive protection strategies for homes and businesses.

ABT Foundation Solutions maintains a focus on permanent fixes that address root causes rather than surface symptoms. The equipment investment underscores dedication to operational excellence, supporting timely responses to seasonal challenges like spring runoff or winter moisture. Property owners benefit from streamlined processes that prioritize safety, quality, and long-term structural integrity.

Founded in 2002, ABT Foundation Solutions, Inc. specializes in foundation repair, basement waterproofing, crawl space repair, concrete leveling, egress window installation, and gutter services for residential and commercial properties in Northeast Wisconsin. The company employs a team of trained professionals who deliver customized, permanent solutions with a focus on quality and durability.
