

Holton Electric Supports Minnesota Businesses with Summer Electrical Readiness Services

June 18, 2026

Saint Paul, Minnesota - June 18, 2026 - PRESSADVANTAGE -

Holton Electric, a commercial electrical contractor in Minnesota, is supporting local businesses with specialized electrical services to ensure reliable performance during the summer season. As warmer weather increases energy demands and outdoor activities, the company helps commercial facilities maintain efficient and safe electrical systems.

Summer brings increased use of air conditioning, refrigeration, and outdoor lighting, which can strain the electrical infrastructure. Holton Electric provides general service and maintenance to address these seasonal needs, including troubleshooting, panel upgrades, and equipment additions or modifications. Technicians focus on optimizing systems to handle peak loads while reducing the risk of outages or inefficiencies.

Services include support for restaurant and food service operations, where reliable power is essential for kitchen equipment, refrigeration units, and HVAC systems. The company also assists with energy-efficient lighting installations and upgrades for both interior and exterior applications, enhancing safety and visibility for summer events, patios, and extended business hours. These solutions help facilities operate smoothly while managing utility costs during periods of elevated demand.

Preventative maintenance programs play a key role in summer readiness. Using tools such as thermal infrared imaging, technicians identify potential issues like overloaded circuits or overheating components before they lead to disruptions. Arc flash assessments and safety training further support compliance and protect personnel in high-activity commercial environments. Through these methods, businesses can prevent costly downtime and ensure smoother operations during peak periods.

The company offers 24/7 emergency service to respond quickly to any unexpected electrical issues that may arise during summer storms or increased usage. Standby generator installations and maintenance provide backup power options for businesses that cannot afford downtime, including manufacturing facilities, educational institutions, and multi-family housing.

Ted LaFrance, President of Holton Electric, noted that summer presents unique challenges for commercial operations in Minnesota. "Our team works closely with clients to prepare electrical systems for higher demands, ensuring they remain reliable and efficient throughout the season."

LaFrance added that collaboration with facility teams allows for tailored solutions that address specific operational needs. "Whether supporting outdoor expansions, optimizing energy use, or maintaining critical equipment, the focus remains on delivering practical, long-term value."

Founded in 2007, Holton Electric integrated with A-1 Electric Service in 2020, incorporating experience dating back to 1982 in the Waconia area. This combination strengthens the company's ability to serve the Twin Cities metro region and beyond as a locally team-operated commercial and light industrial electrical contracting company.

Holton Electric serves diverse industries, including manufacturing, education, restaurants, and commercial real estate. Projects range from production line modifications and school lab upgrades to comprehensive system optimizations that support business continuity. The company's skilled workforce is trained to handle various challenges that arise in these sectors, ensuring that the right solutions are implemented effectively.

The company's approach emphasizes workmanship, integrity, and transparency. Client feedback highlights the team's knowledge, respect for operations, thorough communication, and ability to accommodate scheduling needs without compromising quality. Their commitment to excellence fosters strong relationships with clients, allowing for ongoing support.

As Minnesota businesses navigate summer conditions, Holton Electric continues to provide expert electrical support that helps maintain productivity, safety, and efficiency. The firm's diagnostic capabilities and responsive service position it as a reliable partner for addressing seasonal electrical requirements across the

state.

Holton Electric is a commercial and light industrial electrical contracting company based in Minnesota. It provides professional electrical services to businesses and institutions throughout the region with an emphasis on teamwork, innovation, and client collaboration.
