

Adams Pool Solutions Highlights How Pool Tile Replacement Transforms Bay Area Pools

July 27, 2026

PLEASANTON, CA - July 27, 2026 -

Adams Pool Solutions, a leading pool renovation company serving the San Francisco Bay Area since 1953, is emphasizing the critical role that tile and coping replacement plays in extending pool life and enhancing property value as homeowners prepare for the upcoming swimming season.

The Pleasanton-based company reports increased interest from Bay Area homeowners seeking to address aging pool infrastructure before warmer months arrive. With over 29,000 pool projects completed, the company has identified tile and coping deterioration as one of the most common issues affecting pool longevity and aesthetics.

"Pool tile and coping serve both functional and aesthetic purposes that many homeowners underestimate," said Tony Adams, CEO of Adams Pool Solutions. "Beyond the visual impact, properly installed tile and coping protect the pool shell from water damage and chemical deterioration while creating a seamless transition between the pool and deck areas."

Common indicators that tile and coping require replacement include cracking, chipping, loose tiles, calcium buildup, and visible gaps between tiles. These issues often develop gradually over years of exposure to chemicals, weather fluctuations, and regular use. Left unaddressed, damaged tile and coping can lead to more extensive structural problems requiring costly repairs.

Modern tile options extend far beyond traditional blue and white patterns. Today's materials include glass, natural stone, porcelain, and ceramic tiles available in countless colors, sizes, and textures. Waterline tiles, which sit at the pool's water level, face particular challenges from chemical exposure and temperature changes, making material selection especially important for this application.

Coping, the cap or edge that surrounds the pool perimeter, has evolved significantly in recent years.

Contemporary options include natural stone, precast concrete, brick, and composite materials, each offering different benefits in terms of durability, heat resistance, and slip prevention. The coping choice affects both safety and comfort, as it forms the transition area where swimmers enter and exit the pool.

Adams Pool Solutions pool tile and coping projects typically integrate with broader renovation efforts, including replastering, equipment upgrades, and deck resurfacing. This comprehensive approach ensures all elements work together cohesively while maximizing the renovation investment.

The company's approach emphasizes proper substrate preparation and installation techniques developed through decades of experience. This attention to detail proves particularly important in the Bay Area's varied climate, where pools experience both intense sun exposure and cooler temperatures throughout the year.

Adams Pool Solutions provides pool tile and coping replacement for homeowners across the San Francisco Bay Area. The company specializes in both residential renovations and commercial pool construction for hotels, municipalities, and educational institutions.

Established in 1953, Adams Pool Solutions operates from its Pleasanton headquarters with approximately 340 employees completing around 1,200 projects annually. The family-operated business has grown to become one of the most established pool remodeling firms in the country, serving the San Francisco Bay Area, Central Valley, and Monterey Peninsula. The company maintains affiliations with the California Pool and Spa Association, National Plasterers Council, Pool and Hot Tub Alliance, and Better Business Bureau.
