

TAS Electronics Expands Same-Day Window Tint Services

June 22, 2026

Holland, Ohio - June 22, 2026 -
TAS Electronics, an automotive enhancement specialist with more than 50 years in the industry, has expanded availability of its same-day window tint service, giving vehicle owners faster access to precision computer-cut film installation designed to reduce solar heat, block UV radiation, and improve cabin comfort.

Growing demand for vehicle UV and heat protection has brought more drivers to the shop, as awareness of sun-related interior damage and health risks continues to rise. Drivers searching for window tinting near me are increasingly seeking documented performance ? verified UV block ratings, measurable infrared rejection, and advanced Solar Gard films backed by a warranty ? rather than purely cosmetic results. TAS Electronics Window Tinting has structured its service to address those expectations directly.

A key part of the shop's process is its computerized film-cutting system, which generates precise tint patterns matched to each vehicle's manufacturer specifications. Film is pre-cut off the vehicle rather than trimmed directly on the glass, eliminating a common source of seal and edge damage seen with manual cutting

methods. The approach contributes to a cleaner finish and supports the shop's ability to complete most installations the same day a vehicle is brought in.

TAS Electronics uses Solar Gard window film across its product lineup. The HP Supreme hybrid series offers color-stable performance across seven shades, blocking over 99 percent of UVA and UVB rays and carrying a lifetime warranty against peeling, bubbling, or color change. For drivers prioritizing thermal performance, the shop also installs the VortexIR Ceramic series, which uses nanotechnology to reject up to 88 percent of infrared rays while remaining compatible with GPS, satellite radio, and vehicle connectivity systems.

Most window tinting installations are completed within two to four hours. The combination of pre-cut film technology and experienced installers reduces the correction work that extends appointment times at other shops. All installations are backed by a free lifetime warranty, and the service is available Monday through Saturday.

TAS Electronics installs window tint in compliance with Ohio's administrative code governing visible light transmission limits. The shop's team reviews legal shade options with customers prior to installation, ensuring privacy and protection goals are met without risking vehicle inspection failures.

"We've been serving this community for over 50 years, and what customers want hasn't changed: quality work, fast turnaround, and a shop they can call if something isn't right," said Dave Granata, General Manager of TAS Electronics. "Our window tinting service is built around those same principles ? precision-cut film, proven Solar Gard products, and same-day availability for most vehicles."

Window tinting is one of dozens of services TAS Electronics has offered over its five decades in operation. The shop also installs remote car starters, heated seats, car audio systems, backup cameras, dash cams, LED lighting, vinyl wrap, and a full range of custom automotive enhancements, all supported by in-house professional installation and local warranty service.
